Abstract:

Cadences are formulaic gestures of closure and temporal articulation in music. Although in the minority, rising melodic figures have a long history in cadences in European music of all genres. This essay documents and analyzes characteristic instances of rising cadential lines from the late 16th century through the 1830s.

Introduction

The topic is cadence gestures in traditional European tonal music.¹ The great majority of these follow an 18th-century formula that favors a stepwise descent from scale degree 3 (or even from scale degrees 5 or 8) to the tonic note. A significant minority, however, follow an upward path from ^5 to ^8, or else plot a mirroring path from ^8 down to ^5 and then back up to ^8. The first substantial numbers of these, as we shall see below, are in the dance collection *Terpsichore* by Michael Praetorius (1612), and an even larger number are in the country dances preserved in John Playford's *[English] Dancing Master* (first edition 1651). These two collections strongly suggest that rising cadential figures were relatively common in dance-performance practice, including improvisation.

By, and shortly after, 1700, however, two overwhelming influences effectively nullified the rising cadence: the stereotyped figures of Italian operatic and instrumental practices (especially in the so-called *cadence galante*) and the adoption of the gavotte as the standard for 2/4 contredanses in the French court.

After largely disappearing in the 18th century, rising lines again show up in dance music in the last decades of the century and in the early 19th century, Schubert providing the earliest prominent examples. Beginning after 1770, as the several waltzing dances became increasingly popular in German-speaking areas of central Europe, the possibility of alternatives to dominant practices arose. By 1820, these were expressed, though in radically different ways, by Beethoven, Schubert, and the Rossini-influenced operas of Adolphe Adam. The floodgates were opened, however, in French comic opera by the early 1830s (Adam, Auber) and rising cadences remained a factor in the opera bouffe and operettas of Offenbach, Leclocq, Johann Strauss, jr., and others before finding a niche in the American musical (notably those by Richard Rodgers).

With the polka's quick rise to universal popularity in the 1840s ([link to essay](#)) and with Offenbach's operettas in the 1850s, the change was complete and rising cadence gestures became not just an alternative but a category equal to other cadence types.

I have already written one historical survey of rising cadential gestures, mostly from a Schenkerian standpoint: [rising lines](#). The present essay fills out and complements that first one with a broader range of examples, made possible in part because the selection was not so constrained by abstract Schenkerian background models and their idealist voice leading. The result is a better picture of musical practices over the several centuries separating 16th-century *bicinia* (two-voice compositions mainly for pedagogical use) from Schubert's waltzes.

Beginning, then, in Part I with some comments on the *cadenza perfetta* or *clausula vera*, I offer one more parsing of the history of rising cadence gestures. The territory covered includes, among others, early 17th century Venice and mid-17th century London and Amsterdam (in Part

¹ The majority of the text in this introduction is an edited version of posts from my blog *Ascending Cadence Gestures in Tonal Music*: [link to blog](#).

II), and late-18th and early-19th century Vienna (in Parts III & IV). A postscript discusses an early, Schubert-influenced piece by Robert Schumann.

The ultimate chronological goal of this project, as it unfolded originally on my *Ascending Cadence Gestures* blog, was actually the 1830s in Paris rather than in Vienna and is explained in an essay already published on Texas Scholar Works: [link](#). That goal was to reaffirm and document my claim, developed through a series of score searches begun nearly thirty years ago, that Adolphe Adam's one-act comic opera *Le Châlet* (1834) was a milestone in the history of rising cadence gestures and, as such (combined with its popularity), may have been a primary influence on other composers as rising cadence gestures proliferated in operetta, opera bouffe, and eventually the American musical. The authors of the *Grove Music Online* article note, after all, that some of the contributions of early composers for the Opéra-Comique (that is, in the 1830s), including those of Adam, "held the stage in Paris for over 50 years."²

Looking ahead, beyond the two survey essays (including this one, of course) and the study of *Le Châlet*, I would like to add, first, some immediate context for my *Le Châlet* narrative through posts on *La Dame Blanche* (1825; by Boieldieu, Adam's mentor); Adam's three-act opera *Le Postillon de Lonjumeau* (1836); and Donizetti's *La fille du régiment* (1840). All three of these operas just named were also produced at the Opéra-Comique and were very successful. Some background for *La fille*—and more comparison with *Le Châlet*—will come from a study of Donizetti's *Betty* (Naples, 1836; two-act version 1837), which uses the same Goethe Singspiel as its source.

Eventually, I intend to produce a series of essays on 19th century operas and operettas that make substantive use of rising cadence gestures, especially operettas by Offenbach, Lecocq, and Johann Strauss, jr.

I would gather these operatic uses of rising cadence figures under the heading of "theatrics." Another use might be called "transcendental," and so far as I can tell at the moment it seems to be largely confined to Beethoven, though surely there must be other examples, given Beethoven's enormous influence on concert music in the later 19th century. The results of a search might form still another essay down the road.

² Quote from *Grove Music Online*: article "Opera comique," §5. M. Elizabeth C. Bartlet with Richard Langham Smith.

Part I: 16th Century

Counterpoint and the Rising Cadence Gesture

The articulation of cadences in sixteenth-century European music relied on the formula of third to unison intervals (if the parts are flipped, then it's sixth to octave). In each example just the beginning of a phrase in two voices is shown, followed by the cadence.

Here is an example from literally thousands of pieces showing the treatment of these figures. This is the fifth of Thomas Morley's Duets for Two Viols. In the opening phrase (mm. 1-5), a sixth (marked in m. 4) "prepares" a suspension dissonance that resolves into the 6 of the cadence: asterisks mark the 6-8. In the second phrase, similarly, a third D-F "prepares" a 2-3 bass suspension and the cadential 3-1 follows (note that the lower notated voice is actually higher in pitch at this point).

Il Lamento

V

The musical score consists of three systems, each with two staves. The first system is labeled 'Il Lamento' and 'V'. The second system shows a 6-8 cadence with fingerings 6, 7, 6, 8 and asterisks above the 7 and 6 notes. The third system shows a 3-1 cadence with fingerings 3, 2, 3, 1 and asterisks above the 2 and 3 notes.

And here are the final two phrases, in which the cadence types are reversed: 3-1 first, then 6-8. Again note that the second cadence has the lower notated voice higher in pitch. Indeed, it is one of the uncommon instances of a rising cadential figure in notated ("art") music in the centuries before 1800.

The musical score consists of three systems, each with a treble and bass staff. The first system shows a treble staff with a key signature of one flat and a bass staff with a key signature of one flat. The second system shows a treble staff with a key signature of one flat and a bass staff with a key signature of one flat. The third system shows a treble staff with a key signature of one flat and a bass staff with a key signature of one flat. The score includes various musical notations such as notes, rests, and fingerings.

Far more common in the sixteenth and early seventeenth centuries is to bring a string of parallel sixths down, often with suspensions, toward the 6-8. The example below is from the fifth of the texted bicinia (sometimes called "duets") of Lasso. Four sixth intervals in a row, three with suspensions, make for an inexorable drop to the cadence, and it is only the sudden turn to the final octave that stops the progression (and is a big part of the expressive and formal point).

As we saw above, 16th century cadences with interval pairs 3-1 or 6-8, could be the ground or motivation for a rising melodic gesture, but the odds were against it, mainly because of suspension figures that provided additional downward momentum into the cadence.

In the abstract counterpoint exercises that were derived from 16th century music, the potential for rising cadential figures was, ironically perhaps, much greater than it had been in the actual repertoires those exercises were trying to model. There were two reasons for this:

- (1) the separation of figures into "species" served to isolate suspensions into a single type of exercise;
- (2) in two-voice instruction, it was routine to write one exercise with the ground or cantus above, then another with the ground below, a situation that guaranteed trading off the 3-1 and 6-8 cadences.

Beethoven studied strict counterpoint with Johann Albrechtsberger while Haydn was away in London. And it is here that the potential of a rising melodic gesture in counterpoint exercises came to fruition in music. Beethoven was apparently one of the first dance composers to make direct use of a rising cadence (but see below for a precedent from Mozart). Beethoven's 12 Deutsche Tänze, WoO8, were composed only three months after he finished his counterpoint studies with Albrechtsberger, but the first dance in the set follows an unexpected trajectory. It begins with a stepwise ascent from \wedge_1 to \wedge_3 , elaborated and harmonized with an 8-10-10 voice-leading figure with the bass—this is one of the conventional figures of the partimento tradition. The second strain leads the melody in a determined way upward to \wedge_8 . The first dance in a set such as this one—like the minuets in WoO7, these waltzes were for a public ball—was often used as a refrain, so that Beethoven would have had incentive to make it memorable.

As it happens, Mozart had anticipated Beethoven by twenty years. His set of 12 minuets, K 176, opens with a similar promenade/refrain, and it uses virtually the same opening and closing figures.

Lassus

Lassus published two sets of bicinia in 1577. The first set of fifteen of these are texted, another with twelve are not. Among the texted duets, numbers 6 and 15 use the same text, "Esurientes implevit. . ." [KJV: "He hath filled the hungry with good things; and the rich he hath sent empty away," Luke 1:53; from the Magnificat]. I am not an expert in 16th century text painting and will not comment on that element. Which is another way of saying that I don't see anything obvious in the particular choices of figures or cadence types.

The opening and closing measures of n6 are in the example below. The points of interest here are that Lassus is not afraid to use the 6-8 cadence to close (that is, he shows no prejudice in favor of 3-1), and the overall gesture in the upper voice is rising.

The last of the texted bicinia (n15) uses the same text as n6. Here again I have shown beginning and ending only, and here again the opening phrase is quite long and without cadence in my excerpt (probably this does have something to do with text painting, since the text is about "filling the poor with plenty"; KJV: "He hath filled the hungry with good things"). And here again the focus of my interest is the ending, which offers a more elaborately embellished cadence than did n6, along with even more emphatic rising gestures.

Another texted duet (n14) borrows from the Magnificat. "Fecit potentiam . . ." is in KJV "He hath shewed strength with his arm; he hath scattered the proud in the imagination of their hearts" Luke 1:51. Here a short first phrase ("Fecit potentiam") is without cadence, but the second is very clear (for "in brachio suo"), involving three thirds and two 2-3 bass suspensions.

The conclusion again is the point of interest, however: now familiar rising gestures in connection with a 6-8 cadenza perfetta, but note that the approach in the upper voice is repeated, a less likely option than a more varied, but still mainly stepwise figure.

of the three pieces by Lassus discussed above, the voices largely approached the cadence in the same direction—up, of course, since I was bringing out the historically significant idea of rising cadence gestures.

Contrary motion is entirely possible, too: in the cadence pair below, the 3-1 is approached in a closing wedge, 6-8 in one that opens. Both express broadly basic motion in each of the cadences: 3 closing into 1, 6 opening out to 8.

It is important to note, however, that there is in fact no necessary directional bias in either of the two cadence types, 3-1 and 6-8.

Untitled Duet 3

Giovanni Giacomo Gastoldi (c.1532-1609)

Il primo libro della musica a 2 voci (Venice, 1598)

The image displays a musical score for a two-voice duet, 'Untitled Duet 3' by Giovanni Giacomo Gastoldi. The score is presented in two systems, each with a Canto (soprano) and Tenore (tenor) part. The first system, starting at measure 20, shows a cadence labeled 'cadence = 4-3'. Arrows indicate that both voices move upward towards the cadence. The second system, starting at measure 25, shows a cadence labeled 'cadence = 3-(1)' and 'cadence = 7-8'. Arrows indicate that both voices move downward towards the cadence. The notation includes treble clefs, a key signature of one sharp (F#), and various note values including quarter, eighth, and sixteenth notes, as well as rests.

Following up on wedge shapes in cadences, here are opposing cadence figures, both for 6-8, in n12. The two cadences are at beginning and end of the piece. In the first case, motion is down in both voices and is especially pronounced in the tenor. In the second case, a stream of parallel motion is interrupted in the final few beats as the tenor reaches a high note, E₄, and then descends firmly by step.

Untitled Duet 12

Giovanni Giacomo Gastoldi (c.1532-1609)

Il primo libro della musica a 2 voci (Venice, 1598)

The image displays a musical score for a two-voice duet. The top system features a Canto (Soprano) part on a treble clef staff and a Tenore (Tenor) part on a bass clef staff. Both parts are in common time (C). The Canto part begins with a half note, followed by quarter notes, and ends with a half note. The Tenore part begins with a half note, followed by quarter notes, and ends with a half note. The second system continues the duet with similar rhythmic patterns. Arrows indicate ascending cadence gestures in both parts.

Vecchi

In the same year as Gastoldi, Orazio Vecchi published his own book of instructional duets. I have chosen two of them for the sake of a census of cadence types: n21 & n22. Granted, these pieces are somewhat arbitrary constructions, but I suspect that the numbers in "proper" compositions will be similar.

I tried to focus on clearly articulating phrase-ending cadences. I did not include evaded cadences or brief cadence-like figures that are obviously within longer phrases. On those terms, the duet has 11 cadences, six of which are 6-8, and five are 3-1. Cadence types are distributed more or less evenly throughout. Of particular interest is that every one of the 6-8 cadences is different, something obviously useful for pedagogical illustration.

15

cadence 3

20

cadences 4 & 5

Continuing the census of cadences in the duets of Orazio Vecchi, I look at the twenty-second (btw, there are 38 duets in all). Here are 12 cadences, including a closing cadence with a rising line to $\wedge 8$ (G5 in the Mixolydian mode). I admit, however, to having relaxed my rules and counted an evaded cadence (n6) and both cadences in a cadence pair (ns 7 & 8). Without those, there are 10 cadences, six of which are 6-8 and four are 3-1.

I suspect the slight bias toward 6-8 in the two duets by Vecchi would be erased in bicinia where the two voices are in the same range. I may take up that question at another time, once I find a suitable repertory. (Lassus's duets aren't good for this work because he emphasizes very long phrases, so that even the lengthy un-texted duets have no more than 2 or 3 cadences.)

The musical score is divided into systems, with measures 25, 30, 40, and 45 marked at the beginning of new systems. The score includes several boxed sections highlighting specific ascending cadence gestures:

- cadences 6 & 7:** A boxed section at the top right, spanning measures 25 to 29, showing two staves with ascending melodic lines.
- cadence 8:** A boxed section in the middle left, spanning measures 30 to 34, showing two staves with ascending melodic lines.
- cadence 9:** A boxed section in the middle right, spanning measures 40 to 44, showing two staves with ascending melodic lines.
- cadence 10:** A boxed section at the bottom left, spanning measures 45 to 49, showing two staves with ascending melodic lines.
- cadence 11:** A boxed section at the bottom right, spanning measures 50 to 54, showing two staves with ascending melodic lines.

The score is written in a single system with two staves, using a treble and bass clef. The key signature is one sharp (F#). The time signature is not explicitly shown but appears to be common time (C).

Part II: 17th Century

Praetorius

The enterprising and prolific Michael Praetorius published a volume of more than 300 dances in 1612. These included 22 bransles, 163 courantes, 48 voltas, 43 ballets, 30 passamezzos and galliards (some but not all of them paired), and 12 other dances. All are set in 4 or 5 voices and, as Praetorius notes in his subtitle, are appropriate for performance in social situations. He is also generous in giving credit to French dance master Francisque Caroubel, whose melodies (mainly the bransles) Praetorius sets. Still the majority are Praetorius's own melodies, with a relatively small number labeled unknown (*incerti*).

Roughly 10% of the pieces have rising cadence gestures in one of their strains, more often the last than the first or an interior one. Here are three samples of interior strains to begin.

N285. Among the galliards (a fast triple dance with only occasional play between rhythms in 3/2 and 6/4), n285 is typical in having three strains. The opening of the piece is shown below, along with all of the second strain, where the register of G₅ is established immediately, the range of the melody being from there down the sixth to B₄. The simplicity of the approach and the clarity of the cadence figure itself are characteristic.

The image displays a musical score for a piece titled "Gaillarde." The score is written for five voices, represented by five staves. The first staff is in treble clef, and the others are in various clefs (treble, alto, and bass). The music is in a 3/4 time signature. The first strain is shown on the left, and the second strain is shown on the right. The second strain is highlighted with a box, indicating the register of G₅ is established immediately. The score shows the beginning of the piece and the second strain, with a clear cadence figure at the end of the second strain.

N284. In n284, the second strain initially stretches the register to an octave, starting from below, on G₄ (line), but stays in the upper half once G₅ is reached. In this case, each cadence note receives a consonant chord as harmonization. As point of information, like n285, the cadences in the first and third strains are on C.

One of the rare densely imitative settings in *Terpsichore*, the second strain of n283 (a passamezzo) uses the same figures and registers as the two galliards above but in a more varied and florid manner. Note the deliberate stepwise motion upward in the cadence, with diminutions of scale degree [^]6 (assuming here a Mixolydian octave).

(Comment: The two galliards, ns284-285, are derived from this passamezzo, though in a freer manner than would be suggested if we called them variations (note that the second strain of n284 is much closer to n283 than is the second galliard, n285). This method of variation/adaptation is commonplace in the 16th and early 17th centuries.)

N50. The courrant (courante, corraunt, etc.) in Praetorius's time was closely related to the jig or gigue, and therefore quite different from the later, much subtler and slower French court dance (spelled courante) that also became a staple of late Baroque dance suites. The relationship can be seen in the opening of n50, with its firm triple meter, dotted rhythms, and (atypical) arpeggio figures—these latter are bracketed.

In *Terpsichore*, the many courants are in either two or three strains. In n50, the openings of the second and third strains pick up one or the other of the opening motives, making for a nicely compact melodic design (it should be noted, though, that this is one of the melodies Praetorius marks as "incerti").

The point of interest is the ending of the first strain—see the graphic below. A straightforward cadential move from $\wedge 6$ through $\wedge 7$ to $\wedge 8$ can cause problems in the voice leading if the bass simply moves, as here, from IV to V to I. Praetorius solves the problem with diminutions that create "inserted" intervals between the bass and a potentially offending voice: 8 between two 5s at (a), and 10 between two 8s at (b). His method was standard in polyphony of all sorts (including improvised) in the sixteenth century.

Courante.

The image displays a musical score for a piece titled "Courante." from Praetorius's *Terpsichore*, n50. The score is written for a four-part setting (Soprano, Alto, Tenor, Bass) in G major (one sharp) and 3/4 time. The first system shows the beginning of the piece. The second system shows the end of the first strain, with a circled cadential figure in the upper voice and a circled bass line. The third system shows the beginning of the second strain, which picks up the cadential figure from the first strain. A line connects the circled cadential figure in the second system to the beginning of the second strain in the third system.

(a)

(b)

N308, a galliard in three strains. In the first strain, the register crowned by G_5 is established immediately (circled), moves down through an octave (bar 4), then is recovered in its upper fifth (C_5 - G_5) to close (circled).

The second strain covers the same ground in reverse, although in a very different manner: the lower fourth is touched immediately (first bar), then abandoned for the upper fifth (C_5 - G_5), which Praetorius moves within (bracket) and through (beamed line) for the remainder of the strain. The cadence is at the top of the register. Note that the alto voice doesn't realize the *cadenza perfetta* (it would have gone to G_4 , not B_4): in four-part writing there is a strong bias toward ending with a complete triad, even if this means abandoning the proper cadence (the first strain shows the other option—an incomplete triad—which is much less common but does allow for the 6-8 motion). In five-part writing, on the other hand, one can always realize the 6-8 (or, very rarely in *Terpsichore*, the 3-1).

The third strain (not shown here), incidentally, covers the same fifth to begin, then wanders about the octave more freely before ending on C_5 .

As we can see, a strongly directional, step-wise figure runs across almost all of the second strain in n308. Here are two more galliards with similar figures of differing lengths.

N295. In n295, one of the pieces where the melody is of uncertain authorship: here is a highly profiled motive with a scalar ascent and an unusual stepwise drop after a falling fourth (circled), something that would be frowned on in a 16th century counterpoint class. It's repeated, transposed, in bar 3, then at the original level in bar 5, and finally the scale is realized as a complete ascending octave. The second strain (not shown) is unusually short: four bars of a repeated chord plus cadence. The final strain "fixes" the motive (circled) with a third rather than a fourth and moving by step within the interval. Even stronger scalar figures follow to end with an unusual, direct [Dorian] $\wedge 6 - \wedge 7 - \wedge 8$.

N304. In n304 (by Praetorius himself), rising figures fill out intervals fairly quickly (C5-G5 in the first strain) or more slowly (the same interval in the second strain; a descent from G5 in the third strain). The three cadences are nearly identical, moving stepwise to the final/tonic (angled line in bar 6 of each strain), then "trilling" about it with eighth-note diminutions (bar 7). I've marked the voice exchanges to confirm that the notes *on* the beat in the cantus are the ground notes of the melody and the other eighth notes are the diminutions.

The image displays three systems of musical notation, each representing a different strain of a Gaillarde. Each system consists of three staves: a top staff (cantus), a middle staff (tenor), and a bottom staff (bass). The notation is in a historical style, likely from a 16th-century manuscript. The first system is labeled 'Gaillarde.' at the beginning. Each strain shows a series of notes with eighth-note diminutions, and a final cadence marked by an angled line in bar 6. Voice exchanges are indicated by 'X' marks between the staves.

Ns 92-96. Here are five courantes. They are consecutive in *Terpsichore* and are also closely related to each other by certain features (Praetorius tries to group similar dances when he can). Like the majority of the many courantes, these are in two sections (others are in three sections, like the galliards we've examined earlier).

In this group the focus on the fifth range C5-G5 in the first strain is of interest, with a rise toward a cadence on G5 (a pattern we've also seen in some galliards recently). Note also that these courantes show the typical treatment of the 6-8 cadenza perfetta between the upper and middle voice ("tenor") in five-part writing.

n92:

6 — 8

n93:

n94:

n95:

n96:

Here are several additional examples of strong linear motion across the last phrase of a strain or the entire section. These are all courantes, three with melodies by Praetorius, the other two "incerti."

n35: the first of the more than 160 courantes in *Terpsichore* is in two sections. In the second strain the range C₅-G₅ is established firmly (a), G₅ held, then at (b) a partial descent, and the pattern is repeated from (c) through (e), at which point the range C₅-C₅ is covered yet again and expanded by one for the cadence on A. (It's not marked, but note the 6-8 cadenza perfetta in the cantus and tenor (middle voice).)

(a) (b) (c) (d) (e)

n76: this is the first strain of three. A strong contrast of arpeggio and descent through the octave (first bracket) with a long plodding line back up through that octave (second bracket and beamed line) to a cadence on G5.

n147: author of the melody unknown; this is one in a series of courantes in once-transposed

Dorian mode (final G; one flat in the signature). The box shows a simple linear ascent to the cadence on D5. In the second strain, the figure in part or whole occurs four times in a row.

n161: another melody of uncertain authorship. In two sections, where the second has unusual imbricated rising and falling lines, the former shown in the box, the latter in the beamed line.

n162: by Praetorius, in two sections. The second is 10 bars long, and another very deliberate linear ascent to the final takes six of those bars.

Here is another selection from the many courantes in *Terpsichore*. All but one are in two sections. The focus is now on the second strain where the upper range, usually $\wedge_5\text{-}\wedge_8$ in the mode of the final, is reached early and then its top is either maintained to the end or, more likely, the music drops to the lower end of the range, to move upward again in the cadence.

n38: The lower fifth of the Aeolian octave is presented immediately (arrow plus circled E₅), then inverted two bars later to the upper fourth E₅-A₅, within which a clear descent is followed by a quick ascent to the cadence. Note, incidentally, that the courantes do use hemiolas but only very rarely have suspension dissonances in the cadence, in keeping with the simplicity and directness (and perhaps the rapid tempo) of the popular dance these musics served.

*n*₄₁: Once A₅ is reached in the cadence of the first strain, it is held throughout the abbreviated second strain (only 6 bars, as shown, or more in the manner of a coda or refrain than a separate strain).

n75: The registral patterning of the melody in the second strain is analyzed below. The score is given under that for reference. At (a), a full triad outline (upper bracket) that persists (lower bracket), then at (b) an abrupt shift upward to D₅-A₅; at (c) a slight settling back to C₅-G₅, or as it goes on, really D₅-G₅, which is filled with a line (at c2) to reach the cadence.

(score for *n75*)

n104: A shift to minor quality in the second strain, with a fairly leisurely descent/ascent pair that use both F# and F-natural in each half of the figure.

n110: A courante with just one strain. The pattern is similar to that in *n75*: a triad outline to start, an abrupt transposition of the framing interval, and a cadence. Here the initial triad is also G major, and the second is D major but lower (fourth octave) not higher as in *n75*; the cadence is to D rather than G, and the ascending line is clear and direct.

n111: The first strain has features very similar to those of *n110*, but the space A₄-D₅ is emphasized almost immediately, and it is the D major triad that is elaborated by bars 2-3. The ascent to the cadence is only marginally longer (3 bars rather than 2 1/2) but is full of diminutions.

In the second strain the D major triad frame is even more obvious (box), and there is a descent/ascent linear pair leading to the cadence. (The opening on G and close on D reflects a pattern that is not uncommon in the Mixolydian mode, the mode with a G final that is here transposed to D, requiring the one-sharp signature.)

To close out this section, here are two numbers—a courante and a ballet—that share ascending cadence gestures but otherwise are not closely related in design.

n148 is in once-transposed Dorian; it has three strains but none is marked with a repeat sign. The final cadence is unusual in the uppermost voices in its string of parallel sixths. These help us to separate the ground notes from the diminutions in the cantus.

n265 is a three-strain ballet, also without notated repeats. In effect it is really two strains, as the third is a close variation of the second. See below, where the second and third strains are aligned. The point of interest is in the two cadences, the first of which lies (and is somewhat buried) in the lower register, ending on F_4 , but the second of which is made very prominent by transposition up the octave, ending on the same F_5 that started the strain.

Ballet.

The image displays a musical score for a piece titled "Ballet." The score is written for four staves (two treble and two bass clefs) in a key signature of one flat (B-flat) and a common time signature (C). The first strain is a short piece, and the second is a longer piece. Arrows indicate the alignment of the two strains, showing that the second strain is a close variation of the first, with the second cadence transposed up an octave.

Castello

Virtuosi and improvised counterpoint in the early 17th century. Little is known about Dario Castello, except that he worked in Venice in the first decades of the seventeenth century, that he worked at St. Mark's cathedral, and that he was apparently a virtuoso wind player, probably first of all a bassoonist. In his own time, though, he was quite well known: as Andrew dell'Antonio puts it, "The unusual number of reprints of [his two] books of sonatas is an indication of the popularity and wide diffusion of Castello's works" (*Oxford Music Online*).

Book 1 was published in 1621 as *Sonate concertate in stil moderno, libro primo*. The seventh sonata is typical. Eight sections of varying lengths—but mostly short by modern standards—are typical of the canzona style, as is the continuo bass and virtuosic solo writing. It is from works like this that the sonata da chiesa and the mid-eighteenth century sonata developed.

I first present an overview of the design with incipits for each of the eight sections. After that I look at the closing cadences for same.

An imitative, "fugue-like" section opens (1), but is interrupted by an expressive ornamented adagio at (2). An extended imitative section in triple meter is next (3), then two solo sections follow, first for violin (4), then for bassoon (5). A short section (6) consisting of elaborated sequences is followed by another "fugue-like" section in triple meter (7) and an elaborate cadenza-like close (8). The opening in duple with a change to triple later on, the fugato work, ornamentation, and elaborate close are all typical of solo musical practices from at least the 1590s on.

(1)

Violino

Fagotto

Basso Continuo

(2)

adagio

5 6 5 6 7 5 6 4

(3)

(4)

Example (4) shows a musical score for a solo violin. The score is in 3/4 time and consists of two systems. The first system starts at measure 59 and ends at measure 63. The second system starts at measure 64 and ends at measure 68. The violin part features a series of ascending eighth notes with trills, culminating in a half-note cadence. The bass line provides a simple harmonic accompaniment with whole notes and half notes.

(5)

Example (5) shows a musical score for a solo fagotto. The score is in 3/4 time and consists of two systems. The first system starts at measure 74 and ends at measure 78. The second system starts at measure 79 and ends at measure 83. The fagotto part features a series of ascending eighth notes with trills, culminating in a half-note cadence. The bass line provides a simple harmonic accompaniment with whole notes and half notes. The tempo marking "adagio" is present above the second system.

(6)

Example (6) shows a musical score for a solo violin. The score is in 3/4 time and consists of two systems. The first system starts at measure 92 and ends at measure 96. The second system starts at measure 97 and ends at measure 101. The violin part features a series of ascending eighth notes with trills, culminating in a half-note cadence. The bass line provides a simple harmonic accompaniment with whole notes and half notes. The tempo marking "allegro" is present above the second system.

(7)

Example (7) shows a musical score for a solo violin. The score is in 3/4 time and consists of two systems. The first system starts at measure 105 and ends at measure 109. The second system starts at measure 110 and ends at measure 114. The violin part features a series of ascending eighth notes with trills, culminating in a half-note cadence. The bass line provides a simple harmonic accompaniment with whole notes and half notes.

(8)

Now for the cadences. The range of the violin is restricted; the topmost significant note is A₅: B_{b5}, B₅, and C₆ are *briefly* touched on only once or twice in sections 1, 3, and 4. Most of the section-ending cadences show the soloist's tendency—which will only be exaggerated in subsequent generations and centuries—to want to end brilliantly and therefore in a higher, not lower, register. As a result, rising gestures are common. The *cadenza perfetta* does not appear because the bassoon matches the continuo, and the "three-part rule" of basic counterpoint, where the bass provides the root of the dominant, is followed throughout.

(end of 1)

Handwritten musical score for the first section, labeled "(end of 1)". It consists of three staves. The top staff is in treble clef, the middle in bass clef, and the bottom in bass clef. The music features a complex, fast-moving melody in the upper staves, with many beamed sixteenth and thirty-second notes. The lower staves provide a harmonic accompaniment with longer note values. Fingering numbers 5 and 6 are visible under the bottom staff.

Continuation of the musical score for the first section. It shows the final measures of the piece, with the melody resolving. Fingering numbers 6 and 7 are visible under the bottom staff.

(end of 2)

Handwritten musical score for the second section, labeled "(end of 2)". It consists of three staves. The top staff is in treble clef, the middle in bass clef, and the bottom in bass clef. The music features a complex, fast-moving melody in the upper staves, with many beamed sixteenth and thirty-second notes. The lower staves provide a harmonic accompaniment with longer note values. A fingering number 6 is visible under the bottom staff.

(end of 3)

Handwritten musical score for the third section, labeled "(end of 3)". It consists of three staves. The top staff is in treble clef, the middle in bass clef, and the bottom in bass clef. The music features a complex, fast-moving melody in the upper staves, with many beamed sixteenth and thirty-second notes. The lower staves provide a harmonic accompaniment with longer note values. Fingering numbers 6, 4, and 3 are visible under the bottom staff.

(end of 4)

adagio

Solo.

Fagotto solo.

74

♯ 4 ♯3

This musical score for 'end of 4' features a piano accompaniment and a solo part. The piano part begins with a treble clef and a key signature of one sharp (F#). The melody is composed of eighth and sixteenth notes, with a final cadence marked by a whole note. The bass part consists of a single line of music. The solo part, labeled 'Solo.', is marked 'adagio' and features a single note. The Fagotto solo part is marked 'Fagotto solo.' and features a single note. The score is numbered 74 at the beginning.

(end of 5)

92

♯ ♯

This musical score for 'end of 5' features a piano accompaniment. The piano part begins with a treble clef and a key signature of two sharps (F# and C#). The melody is composed of eighth and sixteenth notes, with a final cadence marked by a whole note. The bass part consists of a single line of music. The score is numbered 92 at the beginning.

(end of 6)

adagio

101

♯ 4 ♯3

This musical score for 'end of 6' features a piano accompaniment and a solo part. The piano part begins with a treble clef and a key signature of one sharp (F#). The melody is composed of eighth and sixteenth notes, with a final cadence marked by a whole note. The bass part consists of a single line of music. The solo part, marked 'adagio', features a single note. The score is numbered 101 at the beginning.

(end of 7; all of 8)

Sonata 10 from book 1 (1621) is for two violins, bassoon, and continuo. Like sonata 7 that I discussed above, it has eight sections. The first section closes with a scalar flourish after the cadence (another feature of soloistic music in this era). Note also the 3-1 cadence (circled) in the two violins—this realizes the "three-part rule" that I mentioned above: *cadenza perfetta* in the upper voices, root of the chord in the bass.

A triple-meter imitative section—similar to the one in sonata 7—does close in the upper register. Note the cadenza perfetta in the two upper voices, and the C# (as ^#3) rather than A (as ^1), breaking the cadence in order to supply a third for the final chord.

The ending of the sonata repeats the cadence of the first section and adds a block-chord adagio that is very likely to have been heavily embellished in performance, perhaps resulting in something that sounded similar to the written-out ending of sonata 7.

Revision : 1.14

Book 2 of Dario Castello's *Sonate concertate in stil moderno* was published in 1629. The fifth sonata is for winds: solo cornet and trombone with continuo. The pattern of soprano and bass instrument that we saw in sonatas from Book 1 continues, as does the treatment of the bass solo as largely an ornamented version of the continuo part. The overall design is very similar to the sonatas we have already looked at (nos. 7 and 10 from Book 1). Like those pieces, this sonata has eight sections: a fugal section in duple time is followed by a short homophonic section [probably meant to be an *adagio*, though it's not marked] and another fugal section; next are two solos, first for cornet and second for trombone, a fugal section in triple meter, a short section in sequences, and a closing *adagio* that begins in imitation but quickly turns into a *cadenza*.

The points of interest include the closing cadence of section 1 and its approach, which is the most extended and direct that I have seen in Castello's sonatas (but see also the end of section 4 below).

29

Cnt.

Tbn.

BC

Within the brief section 2, there is a rare 6-8 cadence:

33

Cnt.

Tbn.

BC

7 - 6
6 - 8

The end of section 4 is similar to that of section 1, but this time note the firmly marching parallel tenths between the continuo and the solo cornet.

67

Cnt.

Tbn.

BC

10 10 10 10 10 11 - 10

Finally, a curiosity: the cadence ending section 7 and leading into the final adagio attempts to combine the *cadenza perfetta* and the cadence with 4-3 suspension. Presumably performers would have understood ways to manage this that were more musically effective than the written notation.

The image displays a musical score for three staves: Cnt. (Cantata), Tbn. (Trombone), and BC (Bassoon). The score is divided into two systems. The first system covers measures 106 to 109, and the second system covers measures 110 to 113. The Cnt. staff features a melodic line with a long-range ascending cadence gesture, marked with a long arrow. The Tbn. staff provides a rhythmic accompaniment. The BC staff has a bass line. The score is marked 'Adagio' and includes a '4 - 3' measure and a '(8)' measure. An arrow points to a measure in the Tbn. staff.

Van Eyck

In the 1640s the Dutch flutist Jacob van Eyck published a pair of remarkable volumes called *Der Fluyten Lust-hof: vol Psalmen, Paduanen, Allemanden, Couranten, Balletten, Aires, &c. Konstigh en lieslyk gefigureert, met veel veranderingen*. As the subtitle announces, the pieces -- all for solo flute (or solo treble instrument) -- range from Calvinist psalm tunes and well known chorales (such as *Vater unser in Himmelreich*) to dances and popular tunes. All of them are dressed with "divisions" (diminutions, or the technique that "breaks" a long note into smaller notes), most with multiple versions (*met veel veranderingen*).

A small number of the tunes have cadence gestures that rise from $\wedge 7$ to $\wedge 8$, and several have long-range linear figures that fit one or another model focused on $\wedge 8$ or on rising from $\wedge 5$. The first example is the simplest, *Wel Jan*, whose complete title is "Wel Jan wat drommel," roughly "Okay Jan, what about it?"³ There are two variations. The tune is reproduced below, along with

³ Reference for the title: Jacob van Eyck, *Der Fluyten Lust-hof*, edited by Winfried Michel and Hermien Teske (Winterthur: Amadeus Verlag, 1984).

the first variation. (The second variation uses eighth-note divisions.)

An interesting comparison may be found in the endings of the theme and the two variations -- these are shown in the final figure below. Note at *1 the origin of a \wedge_3 as an escape tone diminution of E5. Note at *2 that to finish with a final flourish van Eyck adds a bar not in the theme; it is only in this bar that an upper \wedge_2 arises, clearly as an extended ornament of the original cadence.

Wel Jan &c. gebrooken van J. J A C O B van E Y C K: 97

Modo 2.

*1

*2

Reference for the title: Jacob van Eyck, *Der Fluyten Lust-hof*, edited by Winfried Michel and Hermien Teske (Winterthur: Amadeus Verlag, 1984).

The Lutheran chorale (derived from a chant melody) "Vater unser in Himmelreich" is "onse Vader" in the *Fluyten-Lusthof*. See the melody and van Eyck's first variation below. Note that his word for "diminished" is "gebroken," literally "broken." The variation holds closely to the melody but does introduce one interesting feature: at *1 in the second graphic, Eyck uses his diminution to realize the *clausula vera*. It's an unusual figure as a diminution; my guess is that he was making a reference to the upper register of the melody, reached most emphatically in the cadence of the second phrase.

Onse Vader in Hemelr. van I. I. van Eyck gebroken.

The image shows a handwritten musical score on aged paper. The title at the top is "Onse Vader in Hemelr. van I. I. van Eyck gebroken." Below the title are four staves of music. The first staff is the main melody. The second staff is labeled "Modo 2." and shows a variation. The third and fourth staves are also variations. Below the main melody, there are two smaller staves with lines connecting them to specific points in the main melody. The bottom right staff has a boxed-in section labeled "*1".

If my guess is good, then we can assert that van Eyck was sensitive (and, really, why shouldn't he be?) to the arch and palindromic shape of the chorale, which moves its way gradually up, then down, a set of framing intervals. A glimpse of "Himmelreich," perhaps?

D4-A4 C5-F4, A4 as "link" A4-D5 D5-A4 C5-F4, with D5 as "link" A4-D4

A Courante, no. 24 from the first book of the *Fluyten-Lusthof*, may serve as a counter-example to *L'Avignone*. The tune clings throughout to the lower fifth of the modal octave, or D₄-A₄. In this context, B_b is an expressive expansion as neighbor to A -- see the boxed figure.

Courante.

In the first variation, B_b is further embellished by C₅, a "one-too-far" style of expansion that should be familiar to you by now. Significantly, this gesture is repeated -- see *1 and *3 below. At *2 the C₅ even reaches an accented position and acts as the upper fifth for the cadential F₄.

Courante, gebroocken van J. IACOB van EYCK. 30

Modo 2.

*1 *2 *3

Van Eyck might have exploited the extensions of the second variation, but in fact in the second variation he holds close to the first one. In the two boxes on the first line below, note the upper third embellishments of B_b and A, the former generating the first D₅ in the set. The third box (at the end) contains the surprise: a sudden flourish carries the final cadence up to that D₅, rather than down to the D₄ of the tune. We should not try to interpret this as the unveiling of a rising *Urlinie*, but rather as a variant of the cadenza-like flourish we have already seen van Eyck employ several times in closing cadences. Here it realizes the $\wedge^7\text{-}\wedge^8$ always implicit in the background of a $\wedge^2\text{-}\wedge^1$ cadence, but, although the upper fourth is introduced in a dramatic fashion, the lower fifth clearly has priority.

While looking through Winfried Michel and Hermien Teske's edition of *Der Fluyten Lust-hof* for information about van Eyck's titles, I noticed a Courant that I had missed in earlier searches for rising cadence gestures. No. 33 in vol. 1 is a rare Courant in duple meter (so the editors say, 61). The theme is firmly set on F₅ as the upper end of the transposed Ionian ambitus, but the melody's lower end is less certain: it would appear to be A₄ but that stretches down to G₄ for the cadence of the first half (see *1), perhaps suggesting an implied octave F₄-F₅. In the variations, van Eyck does finish out the octave (at F₄) and then further extends that down to C₄ (see the boxes).

The overall point to be made about this is that van Eyck respects the "downward" focus of the tune by embellishing lower and lower and almost entirely avoiding the register above F₅, despite the invitation of the G₅ that opens the second half (see *2).

A curiosity is that van Eyck turns the obvious half cadence ("obvious" if one is thinking F major, that is) into PACs in G minor in the two variations, thinking more appropriate for a modal conception.

"Schasamisie vous re veille" (roughly, "Sweetheart, wake up") has four phrases, the third being repeated to make the fourth. See the phrase markings in the theme below.

In the first variation, the third phrase is played as in the theme, but then its repetition is diminished. See below, the diagonal lines aligning the two phrases. In the second last measure, G₅ is introduced as an escape tone -- the step up/third down figure (here, F₅-G₅-E₅) is one of the most common embellishments in 17th century music, both vocal and instrumental.

The pattern continues in the second variation: the third phrase from *variation 1* is played, and then further diminished as the fourth phrase. See below. In phrase 3, note that the third in the escape tone has been filled in (second last measure of phrase three); so, F₅-G₅-(F₅)-E₅. In phrase 4, the figure is further extended to reach A₅ as a neighbor to G₅.

Thus, there are four different versions of the phrase 3/phrase 4 group: (1) in the theme; (2) in the first variation; (3) the very slightly varied version in the second variation, phrase 3; and (4) in the second variation, phrase 4. The result gives a concise picture of \wedge^2 arising out of the diminution of \wedge^7 .

"Meysje wilje by" (roughly "Miss, will you come here?") This tune is in the Mixolydian mode, and it shows the peculiar leanings of that mode toward its "subdominant": the Mixolydian mode is **not** an old-fashioned version of G major.⁴

It is not surprising, then, that the interval space first expressed is C₅-G₅, that the space becomes D₅-G₅ as the tune goes on, or that the entire song is focused on ^8 in its upper voice. See below.

In the variation, van Eyck expands the space upwards and downwards to the octave A₄-A₅ -- see the box in the figure below -- which leads nicely into a broken two-voice texture in the cadence that ultimately gives us a complete octave space ^1-^8 in the final bar as well.

⁴ Michel and Teske (vol. 2, 57) mistakenly assume that the piece is in C major and ends on the dominant.

"Lavignone": the first and simpler of two versions in the *Fluyten-Lusthof*. There is little to say about this one beyond that the sequential rise from \wedge_5 to \wedge_8 is as plain and clear as one will find anywhere. Like "Meysje wilje by," it also reinforces the basic importance of the modal ambitus (here, the octave D-D) as the frame for the melody.

Van Eyck's second setting of Lavignone ("Tweede Lavignione") is much more elaborate in its variations than was the first. He uses the same device as in "Schasamiste vous re veille," where the second part is repeated in each variation with additional diminutions. The point of interest here is the treatment of the ending. An old-fashioned cadence (for 1640, that is) would invite a suspension figure in a two-voice setting: see the first line below, where D5 is a preparation, the accented D5 the suspension dissonance, and C#5 the resolution in a 7-6 figure. In the first variation (second line below), both D and F are displaced by their upper thirds: D becomes F, C# becomes E. The "one-too-far" gesture is added to this, as G5 is an escape tone.

The final line of the figure above (triplets) is reproduced as the first line below. Note that in the subsequent diminutions (8ths and 16ths) E5 displaces F, which is now pushed back into the previous beat, and G5 is now the upper third embellishment of E5. So: D5-F5, E5-G5. This

adjustment lays the groundwork for the final diminutions (continuous 16ths), which suddenly, cadenza-like, soar up to a high Bb before completing the cadence with C#-D.

Below is a closer look at the moment described above. At *1, F is pushed back into the previous beat. At *2, F is gone as a significant pitch: now it is simply an unaccented part of the scale.

All of this suggests that one should be careful not to jump to conclusions about design (rather than expressive) significance of high pitches, including \wedge_3 . Here, the octave ambitus of the once-transposed Aeolian mode has priority.

Music for Dance, c 1650-1700

Playford

The first edition of John Playford's *English Dancing Master* (all editions after this one were called *The Dancing Master*) was published in 1651, and new versions continued to appear into the first quarter of the 18th century. I have already gathered fifty numbers with ascending cadence gestures in a PDF documentation essay published on Texas Scholar Works: [Playford rising line file](#). Material from that essay is also included in my [Rising Lines essay](#).

In this section, I will analyze a small number of these melodies for matters of register, line, and cadence.

Here is a simple example of register treatment, apparently in service to the title: Under and Over, which appears initially in the second edition (1652). I am using the text as it stands in the fourth edition, from 1670; according to Jeremy Barlow's annotations, several note changes in the ninth (1695) and later editions reduce the modal turns and emphasize typical tonal figures for G minor. (The second flat in the signature, on the other hand, was added in the fourth edition.)

Three of four phrases immediately establish the octave G₄-G₅. The first phrase then moves by step through that octave from above. The third phrase drops that octave by a step to F₄-F₅, while using many of the same notes (see double arrow). The second and fourth phrases drop the lower fifth and hold to the upper fourth instead, with a strong linear motion into the cadence.

Note that, overall, the lower range is extended by a step (from G₄ to F₄—see *) and the upper limit also by a step (from G₅ to A₅—see **).

(108)

Under and over. Longways for as many as will.

D E (G) F# G

A slightly more complex example: Arcadia, which was added in the seventh edition (1686). Four phrases again, marked (a) through (d), and in all of them lines (based on accented pitches)

rather than spaces seem to hold sway: a third overlaps the end of the first phrase, reaching the first note of the second phrase, Bb, which then ascends into the cadence on F5; the third phrase continues from that note to an accented A5, then in the final phrase the march continues upward to close on the remarkably high note Bb5.

(If one insisted on gathering the lines into a middleground-background shape, the options would include (1) Bb: ^3 in bar 1 eventually reaching a primary ^5 in bars 7-8, then ascending in the second strain to ^8; (2) raising the pickup note F5 to background status, and holding it throughout till the final cadence completes the ascent; (3) treating the first phrase as "preliminary" [initial descent] to Bb4, which initiates a rising octave line to Bb5; and (4) reading a line of the sixth beginning with Bb4 in bar 4, ascending to F5 by the end of the strain, then further up to Bb5 in the second strain.)

Arcadia.

[197]

Madge on a Tree appeared in the first edition of *The English Dancing Master* (but this facsimile is from the fourth edition [1670]). The tune was called Mage on a Cree and Margery Cree in some other editions. (Many songs and dance tunes went by various names in that era.)

Clearly a modal tune, Madge on a Tree is in once-transposed Dorian (one flat in the signature with G as the final or tonic note). The climb to the final cadence is as clear as it could be, occupying the entire fourth phrase.

(5)

Madge on a Tree.

Round for Eight.

As a postscript to my earlier comments on the clausula vera or cadenza perfetta in the sixteenth century, I have created a second part (at *) to show how naturally the 6-8 figure appears in a cadence with an ascending upper voice.

Next, The Chierping of the Larke (this facsimile is from the first edition, *The English Dancing Master*). From the second edition on, the C at the end of the third phrase and the C five notes from the end were given sharps—all that suggests that a player would have changed the notes in performance anyway (in the manner of the by then ancient *musica ficta* practice).

Four short phrases are marked (a) through (d) under (1) below. Under (2), patterns of recurring notes and lines are sorted, and under (3) registers. These last clearly parse the octave F5-F4, suggesting a proto-background, but the end of the melody is a surprise, as a wedge figure draws lines to a close on D, final of a once-transposed Aeolian mode. In this case, the registral isolation of F5 at the beginning of (c), its repetition a few notes later, and the ascent to D5 from below, all make a line F5-E5-D5 credible.

(26)

(1) The Chierping of the Larke Longways for eight

(a) (b) (c) (d)

(2) (F: ^8) (^5) 5-line Dm: ^3 4th ^2 ^1

(3) F5 — F5 — — C5 — F4 F5 — — C5 (wedge)

A well-known 16th century tune, Woodcock, also known as The Green Man, is reproduced from the first edition, *The English Dancing Master*. I have sketched this in a preliminary way in the manner of linear analysis. An initial $\wedge 8$ (final of the once-transposed Aeolian mode) sinks to $\wedge 7$ by the end of the short first phrase. The figure appears again in the second phrase and in two consecutive notes to begin the third. An ascent from below (see the angled line) meets $\wedge 7$ and closes to $\wedge 8$ in the final phrase.

Finally, Mug House appeared for the first time in a supplement to the 7th edition (1687); this version is from the 14th edition (1709) and includes the dance instructions that were printed with the melodies in all editions of *The Dancing Master*.

(10)

Mug House. Longways for as many as will. ○○○○
○○○○

First man on his wo. fide.

First wo. crofs over with the 2. wo. turn S. all four; 2. wo. crofs over with the 1. man, and turn S. 1. wo. being in the 2. wo. place, caft up round her, and turn the 2. man; 1. man being in his own place, caft down at the fame time, and turn the 2. wo. men ftanding on their own fide, lead through round; 2. wo. caft up, 1. man turn his own wo. 1. cu. being in the 2. place, run the Figure through, and fo turn your own.

Note: Each Strain is to be play'd twice over.

Four phrases, (a) to (d), are marked up with a soprano-alto pair—(1) and (2). The upper voice is centered on D₅, traces a neighbor note figure in the first phrase, then a line into the cadence in the second phrase. It disappears in the third phrase, to re-emerge in the fourth, which, however, is dominated by G₅, not D. The alto voice is similarly centered on B₄, and it also disappears, after the opening notes of the fourth phrase.

I have made a more traditional linear analysis, as well, based on the above. The reader can decide how plausible this all seems. For my part, I would be inclined to prefer a proto-background B₄-D₅ to begin, expanding to the sixth B₄-G₅ by the end of the second phrase, then remaining there for the duration.

In this section, basic information about the individual tunes is taken from Jeremy Barlow, ed., *The Complete Country Dance Tunes from Playford's Dancing Master, 1651-ca.1728*.

Part III: The later 18th century

Haydn

In footnotes to my article "The Ascending Urlinie" (*Journal of Music Theory* 1987), I listed five works by Haydn: the minuets of Symphony 100 and 104, the slow movement of the string quartet Op. 76n2, and movements in two piano sonatas. In this section I will discuss those pieces and add minuets from three earlier symphonies: nos. 83, 86, and 96.

Let's start with the minuet in Symphony no. 83.

Rising figures appear in both the minuet and its trio. In the former, the first strain suggests the possibility of a rising line (or other figure) that would balance the continual descent in the presentation phrase (bars 1-4), but the continuation phrase doesn't work this out at all clearly.

The reprise is another matter. Although uncertainty still exists about which note in the two-note cells is primary, it is really not all that serious a factor, as one can just build an octave line from G₄-G₅ if you don't like mine from F#₄-F#₅ with resolution to G₅.

In the trio, B₄ in the antecedent phrase starts a very common motion that settles on A₄ (as \wedge_2) after touching the upper neighbor C₅. In the consequent phrase, C is altered to C# (another common feature) in order to settle on D₅ at the end. This is the sort of thing that would be understood as motion to a cover tone, with an interruption (with implied? A₄) in Schenkerian analysis.

As in the menuet itself, the reprise of the trio manages the figure a different way, though with no suggestion of an ascending cadence gesture. Here Haydn anticipates many early 18th century waltzes in leaving notes of the dominant chord "hanging" over the final tonic: E₅ "might" have gone to D₅ [this one is especially important to the waltz], and C₅ to B₄.

As the four-movement symphony model crystallized in the 1770s, the individual movements took on the familiar characteristics we associate with the late 18th century: the first movement an overture, the second an aria, the third a menuet, and the fourth a contredanse (after Leonard Ratner). Of these, the last was the least stable: only in the early to mid-1770s were the contredanses really danceable or recognizable to an audience as programmatic "portrayals" of the dance (I have written about this here: [link](#); others who have written significantly about the two dance movements include Tilden Russell, Sarah Reichart, Wye Allanbrook, and Melanie Lowe). Apart from anomalies (such as fugal movements), by the 1780s finales as dance-finales are perhaps best characterized as overtures utilizing dance topics.

The menuet remained much closer to its dance model. Cast in virtually all instances as a dance with one trio, it was a miniature representation of the actual dance. As many writers have noted, however, the dance itself changed and the music changed with it. In the early part of the century, the menuet of the French court was a couple dance that was meant as a public display of skill and grace. After the death of Louis XIV, it gradually devolved into a perfunctory opening formality for the ball, where it was followed as soon as possible by the lively, very social intercourse of the contredanse, whose musics were almost always gavottes (duple) or jigs (triple) (Semmens 2004).

In Germanophone areas, the formal menuet persisted, but it was joined by a hybrid type that was modeled on the region's "turning" dances (*walzen* = turning). Haydn was one of the first to exploit this opportunity, and it is no surprise, then, that the violinistic figures of the *ländler* should find their way into the symphony's third movement, including rising melodic gestures and cadences.

In Symphony no. 86 (composed in 1786), Haydn makes the rising gesture the main event, as the line connecting all three of the first strain's four-measure phrases shows (see below). Note that the steady progress from ^1 to ^5 (D5 to A5) is pushed "one step too far" to B5 before settling on A5 in the cadence. That bit of excessive energy has consequences in the reprise.

Allegretto

D: I 6 ii 16 I

"one-too-far" (^5)

A: V/ii ii V I

As in the opening, the first two phrases of the reprise march upward from D₅ to A₅, then go through A₅ to B₅ in the third phrase. This time, however, B₅ drops to C₅-D₅ for the cadence. The end result is a "circle" of sorts, from D₅ back to itself, but by means of an octave's worth of a scale. This device of undercutting the rise from [^]6 to [^]7 is discussed in my *JMT* article and seems to be particularly characteristic of the later 18th century. To speculate: the conventions associated with the dominant Italian style (which we know better nowadays through research on the partimenti, evidence of methods of instruction) were so strong that Haydn felt an obligation to observe them in some situations, rather than take full advantage of the rising cadence gesture. In any case, the leap downward from a subdominant to the leading tone is very expressive in and of itself.

(reprise)

^1 ^2 ^3 ^4 ^5

(#^5) ^6 *^7 ^1 (= ^8)

The coda that follows involves some play on the figures we have just heard. The humorous subversion of D₅ through C₅ (at the fermata) leads the line (*fortissimo*!) back down to ^₅, but then the original cadence is repeated to end, now with a final flourish that gives us ^₇ and ^₈ in their "correct" register, as C#₆ and D₆.

(coda)

^6 ^7 ^7 !! ^6

^5 (^#5) ^6 (^7) ^7 ! ^8 !

D: I ————— IV ————— V7 ————— I

Information on French dance practices after the death of Louis XIV came from Richard Semmens, *The Bals Publics at The Paris Opera (1716-1763)* (Pendragon Press, 2004).

In comments above about the menuet from Symphony no. 86, I observed that the line from \wedge_1 to \wedge_5 (D₅ to A₅) in the first strain is pushed "one step too far" to B₅ before settling on A₅ in the cadence. Here is the example:

This "one-too-far" figure has its roots in 17th century improvised embellishment practices. Here is a simple example adapted from the van Eyck series in Part II above. The upper staff is the ending of the original tune ("Wel Jan wat drommel"), the lower staff the equivalent place in the first variation. The escape tone diminutions are circled. The last of them is not quite a diminution, as van Eyck actually reorders the notes of the original, but the effect is pretty much the same.

(a)

Example (a) shows a cadence gesture in G major. The bass line consists of a half note D (pedal base), followed by a quarter note G (passing tone), and a quarter note F# (consonant). The treble line shows a half note chord of G-B-D, followed by a half note chord of G-A-B. The escape tone B is marked with a caret and the number 6 (^6).

(b1)

Example (b1) shows a cadence gesture in G major. The bass line consists of a half note D (pedal base), followed by a quarter note G (passing tone), and a quarter note F# (consonant). The treble line shows a half note chord of G-B-D, followed by a half note chord of G-A-B. The escape tone B is marked with the number 8 and a dashed line to the number 7.

(b2)

Example (b2) shows a cadence gesture in G major. The bass line consists of a half note D (pedal base), followed by a quarter note G (passing tone), and a quarter note F# (consonant). The treble line shows a half note chord of G-B-D, followed by a half note chord of G-A-B. The escape tone B is marked with the number 8 and the number 9 in parentheses.

(c1)

Example (c1) shows a cadence gesture in G major. The bass line consists of a half note D (pedal base), followed by a quarter note G (passing tone), and a quarter note F# (consonant). The treble line shows a half note chord of G-B-D, followed by a half note chord of G-A-B. The escape tone B is marked with the number 8 and the number 9 in parentheses.

(c2)

Example (c2) shows a cadence gesture in G major. The bass line consists of a half note D (pedal base), followed by a quarter note G (passing tone), and a quarter note F# (consonant). The treble line shows a half note chord of G-B-D, followed by a half note chord of G-A-B. The escape tone B is marked with the number 8 and the number 9 in parentheses.

(d)

Example (d) shows a cadence gesture in G major. The bass line consists of a half note D (pedal base), followed by a quarter note G (passing tone), and a quarter note F# (consonant). The treble line shows a half note chord of G-B-D, followed by a half note chord of G-A-B. The escape tone B is marked with the number 8 and the number 9 in parentheses.

D: V7 V9 I

In tonal music of the major-minor system, the most familiar—and probably most influential—figure of this type involves scale degree $\wedge 6$. In example (a) below, the motion from the consonant A through a passing tone G to a consonant F# is embellished with an escape tone B. This is rather mild business, of course, as the B is consonant with the pedal base D. Even in my rather Brahmsian version, with its third and octave doublings, the effect is sweet rather than dissonant. In example (b1) the underlying voice leading pattern is shown, this time with a change of bass, however. It's this version—embellishment of V rather than I—that is commonly found throughout the century from roughly 1770 to 1870—see example (b2) for the figure with escape tone. Examples (c1) and (c2), then, show two versions with full harmonies.

The escape tone figure was one of the most important enablers of the dominant ninth chord. All it took—as Schubert and others in his generation discovered—was to replace the passing motion with a neighbor figure by resolving $\wedge 6$ back into $\wedge 5$ over the chord change.

The menuet of Symphony no. 96 (1791) is a counter-example. Where the rising line was the primary figure in Symphony no. 86, III, as we saw above, and is eventually connected to a rising cadence gesture, in Symphony no. 96 the promise of same is not realized. In fact, Haydn goes out of his way to undermine (more like demolish) it.

The opening figure is more arpeggio—a "rocket"—than line, but it does establish A₅ by the end of the phrase (bar 4). The primary cadence of the first strain, however, drops down the octave to close on B₄-A₄ (circled notes). (These examples, btw, are from a piano four-hands edition; I couldn't find a two-stave reduction.)

Allegretto.

(codetta)

Below is the principal cadence in the reprise: it's down, down, down in all parts but the bass. The codetta, at least, does make a small effort to compensate, but there is nothing unusual about it: an "up and out" flourish in the final seconds is very common in the later 18th and early 19th centuries, so much so as to be a cliché for opera overtures, scenes, and arias (where the orchestra provides the flourish after the singer finishes).

A musical score for a principal cadence in the reprise, featuring a piano and a bass. The piano part is in treble clef with a key signature of two sharps (F# and C#). The bass part is in bass clef with the same key signature. The piano part consists of a series of eighth-note chords that descend stepwise, ending with a final flourish. The bass part consists of a series of eighth-note chords that descend stepwise, ending with a final flourish. A long arrow points from the beginning of the piano part to the end of the bass part, indicating the overall downward motion. The tempo is marked 'ff' (fortissimo).

(codetta)

A musical score for a codetta, featuring a piano and a bass. The piano part is in treble clef with a key signature of two sharps (F# and C#). The bass part is in bass clef with the same key signature. The piano part consists of a series of eighth-note chords that descend stepwise, ending with a final flourish. The bass part consists of a series of eighth-note chords that descend stepwise, ending with a final flourish. The tempo is marked 'f' (forte).

Another piece mentioned in footnotes to my article "The Ascending Urlinie" (*Journal of Music Theory* 1987) is the menuet in Haydn's Symphony 100. In the article I wrote that motivic foregrounding and layering did not necessarily generate rising background lines, and in note 28 said this:

The Menuet of Haydn's Symphony No. 100 is a case in point. In the first period (measures 1-8, which stand for the whole), the initial motion is strongly downward, but the final cadence produces a clear ascent from $\wedge 5$ to $\wedge 8$ in the upper-most part.

Thinking of this in Schenkerian terms—as I was in 1987—the rising line is not workable in the theme's first presentation because it doesn't mesh well with the bass, especially in bars 5-6, where one would have to imagine a doubling of bass and soprano, never a good idea. It's much easier to build a line in this way: D5 initiates a fifth-line; to C in bar 4, recapture C in bar 6, B on the last beat of that bar, then A in bar 7, and an implied G in bar 8. The ascending scale in the cadence is boundary play. See this version here:

Moderato.

G: I V7

vi ii6 V I

In the reprise, on the other hand, the chromatic passing tone D# in the bass (from m. 6) is gone, and a string of diatonic figures, all rising, take over the lower parts, directly linking the chromatic scale fragment to the diatonic scale fragment (see the arrows in the figure below). As a result, the rising line from $\wedge 5$ to $\wedge 8$ has a clear path and pitch design can be read as well-matched to the important aspects of expression.

The image contains two musical excerpts. The top excerpt is from Haydn's Symphony no. 86, showing a rising chromatic scale in the treble clef starting from a G5, with a forte (f) dynamic marking in the bass. The bottom excerpt is from Haydn's Symphony no. 104, showing a rising chromatic scale in the treble clef starting from a D5, with a forte (f) dynamic marking in the bass. Both excerpts include annotations for scale degrees: ^5, ^5, ^4, (^4), ^3, ^2, (^6), ^6 ^7 ^8, and (^1).

Nevertheless, nowadays I think that octave shapes work just as well as lines to describe the frame of this theme. In the first phrase, the ornamented arpeggiation that brings G5 down to G4 is only answered meagerly by the rising chromatic scale in bars 3-4. The second phrase does better, as A5 to A4 is answered by the diatonic scale that brings the close back to G5.

Another piece from footnotes to my "Ascending Urlinie" article: Haydn, Symphony no. 104, menuet. This piece is among those I argued use "the simplest form" of the rising background line (fn28). It's not quite that simple, however—the same drop from ^6 down to ^7 that we found in the menuet of Symphony no. 86 above. About that one I wrote:

This time [in the reprise] B5 drops to C#5-D5 for the cadence. The end result is a "circle" of sorts, from D5 back to itself, but by means of an octave's worth of a scale. This device of undercutting the rise from ^6 to ^7 is discussed in my *JMT* article and seems to be particularly characteristic of the later 18th century. To speculate: the conventions associated with the dominant Italian style (which we know better nowadays through research on the partimenti, evidence of methods of instruction) were so strong that Haydn felt an obligation to observe them in some situations, rather than take full advantage of the rising cadence gesture. In any case, the leap downward from a subdominant to the leading tone is very expressive in and of itself.

The key is the same in Symphony no. 104, ^5 is as firmly settled as the tonic pedal note underneath it, and a string of parallel sixths lead the melodic line down to the cadence. Only the *sforzando* on the last beat of bar 6 suggests anything different: B5 sticks out above, then leaps down to the dominant's C#5 (see the box).

Allegro. (a) A5 ----- G5 F#5 E5 — ()

D5 (b)

What that *sforzando* hints at it is the possibility of a rising line from A5, but, as happened in Symphony no. 86, directionality is undermined by curling back to the lower octave instead of rising toward C#6 and D6.

(a) A5 ----- () B5 C#5 D5

As we have found more than once already, Haydn can't seem to leave things alone in the reprise, and the effects can easily be seen even in design features like linear patterns. In the A section, the eight-bar theme is repeated (in different instrumentation). In the reprise, the theme statement makes it through six bars before changes start, the overall result being an extension of the continuation phrase from four bars to eleven, including two bars of grand pause (!), and a clearly profiled stepwise ascent from B4 through C#5 to D5 (see the second system below). The codetta adds a little flourish that gives us C#5-D6 at last.

(a) (extension)

A5 ————— G5 F#5 E5 (G5 F#5) ??

(codetta)

B4 ————— C#5 ————— D5 ————— C#6 D6

This condensed version shows just the \wedge_5 - \wedge_8 progress over the course of the reprise.

(a) (extension)

\wedge_5 ————— \wedge_6 ————— \wedge_7 ————— \wedge_8

The image shows a musical score for a piano piece in 3/4 time. The score is divided into two systems. The first system consists of two staves (treble and bass clef). The treble staff has a rising line of eighth notes, with a dashed line above it labeled 'G5' at the beginning and 'G4' at the end. The bass staff has a series of chords. The second system also consists of two staves. The treble staff has a rising line of eighth notes, with a dashed line above it labeled 'A4' at the beginning and 'F#5-G5' at the end. The bass staff has a series of chords. The score is written in a key with one sharp (F#) and a 3/4 time signature.

In footnote 32 to my "Ascending Urlinie" article, I included the Haydn Piano Sonatas in Eb and Ab—the slow movement of the former (Hob. XVI/52, II), the menuet of the latter (Hob. XVI/43, II)—among pieces that use one of the variants of the rising line: the form \wedge_5 - \wedge_6 -(reg.) \wedge_7 - \wedge_8 . We've seen this version already in the menuets of Symphony no. 86 and no. 104.

Here I will use my holograph sketch of this piece; it's probably from 1982 (when I did most of the initial research on rising lines for the sake of a Schenker seminar). I have placed a facsimile in my public folder on Dropbox: [link](#).

The opening is one of those designed to frighten beginning Schenker students, as it offers \wedge_5 , \wedge_8 , and \wedge_3 as plausible starting points for an Urlinie. Although \wedge_3 is weak, since it is over vi, not I, the move to \wedge_2 in bar 4 has to be encouraging; and you can almost always read chord support backwards to the beginning if you really want to (true here), so that \wedge_3 is understood to be supported by the initial tonic chord rather than the vi that prolongs that I.

Menuetto I

8

16 17
(continuation phrase)

In 1982, however, I read the Urlinie from \wedge^5 , not at all disturbed by its cover-tone quality, as \wedge^5 very often sounds like that in its prolongations. The \wedge^3 and its interruption, then, are placed in an alto voice. See the condensed version of my sketch below.

$\frac{5}{3} = \left(\frac{10}{4} \frac{6}{4} \right) = 5$

16 17 18 19 20 21 22 23 24 25
(continuation phrase)

In the second strain's altered reprise, one can certainly be forgiven for wondering about \wedge^3 again—note the prominent C6, then the double neighbor figure—but one is obliged to imply/ invent the \wedge^2 in the cadence. A line consisting of \wedge^5 - \wedge^6 -(reg) \wedge^7 - \wedge^8 is more direct and also more musically satisfying.

Another piece that I included in footnote 32 to my "Ascending Urlinie" article is the slow movement of the Sonata in Eb, Hob. XVI/52—this was among pieces that use one of the variants of the rising line: the form $\wedge^5\text{-}\wedge^6\text{-(reg.)}\wedge^7\text{-}\wedge^8$. And again I am making use of my holograph analytical sketch from 1982. See the entire sketch here: [page 1 link](#); [page 2 link](#). Score links: [page 1](#); [page 2](#).

The opening phrase is more easily read from \wedge^3 than from \wedge^5 : the end of the initial tonic prolongation is at the 32nd note topped by G#5. I chose \wedge^5 because of its longer-range implications, specifically in the internal reprise within the A section (more on that below). My sketch of the opening, then, consigns \wedge^3 (as G#5) to a convoluted unfolding pair; I marked it "over" for "overlap" because that's the term that my mentor, Allen Forte, used (see his Schenker textbook co-written with Steven Gilbert).

In the elaborated restatement ending the A section, $\wedge 5$ (B \sharp in the second measure) is more obviously a cover tone, but it is the sudden sweep up from it to E \flat that is the major expressive event. This radical expansion of the upward leaps from the opening bars starts a chain of leaps: B \sharp to E \flat in the fourth measure and G \sharp to C \sharp in the fifth measure. The line splits at the first of these (see the two $\wedge 5$ s marked in the score and the branching lines in the sketch), the lower one reaching G \sharp and the upper one taking C \sharp before both lines drop an octave over the dominant, G \sharp to F \sharp and C \sharp to D \sharp .

The slow movement of the string quartet, op. 76n2 was also mentioned in a footnote to my "Ascending Urlinie" article, twice in fact. In footnote 29, I included it among pieces that use the " $\wedge 5$ - $\wedge 6$ -($\wedge 8$)- $\wedge 7$ - $\wedge 8$ model or one of its variants"; in footnote 31 it was "the form $\wedge 5$ - $\wedge 6$ -(reg.) $\wedge 7$ - $\wedge 8$." These refer to different form sections of the piece. Of these two readings, the first is very clear, but the second I no longer agree with. Details below.

The design of the movement is ABA with an extended coda. Section B starts in the tonic minor, but is unstable (the tonic minor lasts only a bar before we settle into its own bVI region, which lasts for about half the section's duration). The reprise is complete except that a fairly lengthy coda is initiated by a deceptive cadence on what should have been the final cadential tonic.

The main theme (A) is a closed small form with repeats. Its treatment of a rising background line is quite clear and straightforward: an apparent $\wedge 3$ (F#) at the beginning is supplanted by $\wedge 5$, which looked to be a cover tone at first but before long takes over as the principal register. Note the ($\wedge 8$) that supplies a note for the melody over the cadential dominant's 6/4; and $\wedge 7$ - $\wedge 8$ is doubled in the second violin.

Andante o più tosto allegretto

musical score for the first system of a piece in D major, marked "Andante o più tosto allegretto". The score features a vocal line with "mezza voce" and "ten." markings, and a piano accompaniment with "pizz." (pizzicato) markings. The key signature has two sharps (F# and C#). The tempo/mood is "Andante o più tosto allegretto". The score includes a boxed section of the vocal line and a boxed section of the piano accompaniment. Below the piano part, the harmonic progression is indicated as D: I, ii6, V, I. Above the boxed section of the piano part, the scale degrees $\wedge 5$, $\wedge 6$, $(\wedge 8)\wedge 7$, $\wedge 8$ are marked. Below the boxed section of the piano part, the scale degrees 6-5, 4-3 are marked.

A brief B-section offers an unusual turn by ending firmly on F# minor (iii in D major; iii is generally considered the "weakest" of the diatonic triads, a characterization that extends to its tonal region). The explanation is that Haydn thus allows himself a play on the opening motive A-F#—f#: $\wedge 3$ - $\wedge 1$ turns into D: $\wedge 5$ - $\wedge 3$ without benefit of any transitioning harmonic progression. In this case, note that Haydn could easily have included the cadenza perfetta between first violin and viola but instead doubles the third of the final chord. The third was doubled in the opening statement of the theme, too, and we have to assume that there was something about the sound that appealed to him.

musical score for the second system of the piece. The score features a vocal line with "pizz." (pizzicato) and "m.v." (mezza voce) markings, and a piano accompaniment with "pizz." (pizzicato) markings. The key signature has two sharps (F# and C#). The tempo/mood is "Andante o più tosto allegretto". The score includes a boxed section of the vocal line and a boxed section of the piano accompaniment. The measure number 10 is indicated above the first measure of the boxed section of the piano part.

musical score for the third system of the piece. The score features a vocal line with "arco" (arco) markings, and a piano accompaniment with "arco" (arco) markings. The key signature has two sharps (F# and C#). The tempo/mood is "Andante o più tosto allegretto". The score includes a boxed section of the vocal line and a boxed section of the piano accompaniment. The measure number 10 is indicated above the first measure of the boxed section of the piano part.

In the reprise of the A section, the Urlinie form is altered to another variant that I discuss in the *JMT* article: $\wedge 5 - \wedge 6 - (\wedge 5) - \wedge 7 - \wedge 8$. Note that the second violin follows this figure note for note (* and box).

The image displays two systems of musical notation for a string quartet. The first system consists of four staves. The top staff is a first violin part with a continuous ascending melodic line. The second, third, and fourth staves are marked 'pizz.' (pizzicato) and contain a rhythmic accompaniment. The second system also has four staves. The first violin part continues its melodic line, with a specific ascending figure circled. The second violin part has a section boxed, which corresponds to the Urlinie form mentioned in the text. Above the second system, the Urlinie form is explicitly labeled as $\wedge 5$, $\wedge 6$, $(\wedge 5)$, $\wedge 7$, and $\wedge 8$.

In m. 50 is the deceptive cadence I referred to above. What follows from it is a strongly profiled descent to a dramatic diminished seventh chord and a brief cadenza for the first violin (m. 57).

50

D: V7 ----- vi

più adagio e più piano

f *p*

Here are the immediately following measures (58-62), which finally bring the principal cadence. In footnote 31 of the *JMT* article, I applied $\wedge^5\text{-}\wedge^6\text{-(reg.)}\wedge^7\text{-}\wedge^8$ to this movement, meaning by it this ending. The treatment of register, however, is more complicated than it was in the Eb sonata or other pieces where \wedge^6 dropped down to \wedge^7 . Here \wedge^6 does drop to \wedge^7 (m. 61), but \wedge^7 also drops to \wedge^8 (or \wedge^1). That, combined with the downward figuration in mm. 60-61, seems to me not just to conceal but effectively to erase the rising-line formula here. Reading this as a rising cadence gesture reminds me of those tortured Schenkerian readings that dip down into inner voices or imply this and that in order to come up with an acceptable line. For this kind of event, I prefer the proto-background model—see the next example.

The image displays a musical score for a piano piece, consisting of two systems of staves. The first system includes measures 60 and 61, with annotations $\wedge 6$ and $\wedge 5$ above the staves. The second system includes measures 62, 63, and 64, with annotations $\wedge 6?$, $\wedge 7?$, and $\wedge 8?$ above the staves. Dynamics include *pp* and *f*.

The figure that *does* make musical sense here is the fifth-frame of the violin's repeated figures in mm. 60-62. The upper end ($\wedge 5$) is never effectively abandoned, and the lower end ($\wedge 1$) moves to its lower neighbor only to fit into the cadential V7. The intervallic frame, then, is as shown at the lower right.

The image displays musical notation for Haydn's String Quartet op. 76 no. 2, second movement. It includes a piano introduction and a minuet. The notation is in G major and 3/4 time. The first system shows the piano introduction with a treble and bass staff. The second system shows the minuet with a treble and bass staff. The third system shows the minuet with a treble and bass staff. The fourth system shows the minuet with a treble and bass staff. The fifth system shows the minuet with a treble and bass staff. The sixth system shows the minuet with a treble and bass staff. The seventh system shows the minuet with a treble and bass staff. The eighth system shows the minuet with a treble and bass staff. The ninth system shows the minuet with a treble and bass staff. The tenth system shows the minuet with a treble and bass staff. The eleventh system shows the minuet with a treble and bass staff. The twelfth system shows the minuet with a treble and bass staff. The thirteenth system shows the minuet with a treble and bass staff. The fourteenth system shows the minuet with a treble and bass staff. The fifteenth system shows the minuet with a treble and bass staff. The sixteenth system shows the minuet with a treble and bass staff. The seventeenth system shows the minuet with a treble and bass staff. The eighteenth system shows the minuet with a treble and bass staff. The nineteenth system shows the minuet with a treble and bass staff. The twentieth system shows the minuet with a treble and bass staff. The twenty-first system shows the minuet with a treble and bass staff. The twenty-second system shows the minuet with a treble and bass staff. The twenty-third system shows the minuet with a treble and bass staff. The twenty-four system shows the minuet with a treble and bass staff. The twenty-fifth system shows the minuet with a treble and bass staff. The twenty-six system shows the minuet with a treble and bass staff. The twenty-seventh system shows the minuet with a treble and bass staff. The twenty-eighth system shows the minuet with a treble and bass staff. The twenty-ninth system shows the minuet with a treble and bass staff. The thirtieth system shows the minuet with a treble and bass staff. The thirty-first system shows the minuet with a treble and bass staff. The thirty-second system shows the minuet with a treble and bass staff. The thirty-third system shows the minuet with a treble and bass staff. The thirty-four system shows the minuet with a treble and bass staff. The thirty-fifth system shows the minuet with a treble and bass staff. The thirty-six system shows the minuet with a treble and bass staff. The thirty-seventh system shows the minuet with a treble and bass staff. The thirty-eighth system shows the minuet with a treble and bass staff. The thirty-ninth system shows the minuet with a treble and bass staff. The fortieth system shows the minuet with a treble and bass staff. The forty-first system shows the minuet with a treble and bass staff. The forty-second system shows the minuet with a treble and bass staff. The forty-third system shows the minuet with a treble and bass staff. The forty-four system shows the minuet with a treble and bass staff. The forty-fifth system shows the minuet with a treble and bass staff. While pulling out from a PDF file the score of Haydn's String Quartet op. 76 no. 2, second movement, I noticed for the first time some interesting shapes in the trio of the minuet. In the first strain a pedal tonic eventually allows a frequently repeated \wedge_1 (D5) to rise to \wedge_5 (m. 47) and then an octave higher (A6 in m. 49), where it stays until the cadence while an inner voice moves down from \wedge_3 (m. 49) to \wedge_7 (m. 52 in the second violin; arrow).

Trio. 40

p sempre stacc. *cresc.* *f* *ff*

cresc. *p sempre stacc.* *f* *ff*

cresc. *f* *ff*

50

1. 2.

These melodic shapes in the first strain set up the possibility of a rising cadence gesture in the reprise, and so it happens here, in the most direct example I've seen in the music of Haydn. Everything points to the conclusion that Haydn was just as familiar with the ländler style as were Mozart and Beethoven at around the same time.

Mozart

Mozart, Menuets, K. 164 (1772)

While working on a project to describe formal functions in the first strains of minuets from Mozart to Schubert ([link to the essay](#)), I noticed some ascending gestures in both n_4 and its trio.

In the old *Mozart Werke*, K. 164 has four minuets and trios. Two others--titled "2 Menuette" as Series 24 N.14a--were found to belong to the set as well; these became n_3 & 4 in the complete set of six. When I use " n_4 " I am referring to that number in the complete set. Here is the IMSLP link for both files: [K164](#).

The rising scale is certainly fundamental to the first strain of n_4 , the entire octave G_4 - G_5 being traversed before going one tonic chord tone "too-far" to B_5 in bar 8, then dropping back. (Only violin₁ and bass are shown here.)

The scalar mid-point D_5 is reached in bar 4 and its role firmly settled with the echoing extension of bars 5-6. The melodic design of the whole is comfortably read with Schenker-style lines:

The second strain doesn't follow up on the hierarchy suggested by this arrangement of lines. Instead, it sets itself in the upper tetrachord, emphasizing $\wedge 8$ with another confirming echo (bars 5-6). The parts shown are flutes, violin 1, and bass. The violins drop down an octave at the last moment (circled), but the flutes reiterate and reinforce the upper register.

antecedent extension continuation

In the trio, the gesture of ascent is, if anything, even more obvious and results in a simple ascending *Umlinie* figure, $\wedge_5\text{-}\wedge_6\text{-}\wedge_7\text{-}\wedge_8$, across the first strain. Parts shown are flute, violin 1, and bass.

antecedent consequent

Trio.
Flauto.

The second strain is in a sense the reversal of the second strain in the minuet: instead of holding to the high note reached there as the end of the line (G_5), here Mozart turns back to the initial note of the line (G_4 in the violin). Note the (unmarked) "one-too-far" C_5 in bar 5.

sentence presentation continuation

A pairing of thirds in bars 1-4 involves an overlap-- F_4 should resolve to E_4 but is "overlapped" by the recovered G_4 . I've always thought this stepwise overlap (as opposed to more vigorous "reaching over") was a bit of reductive sleight of hand but it is common in Schenkerian analytic practice and there is no question that \wedge_5 as G_4 is recovered, then dominates the rest of the strain's melody. At the end is one of those "nearly audible" \wedge_3 s that later became commonplace in the waltz (and polka) repertoire.

Ascending gestures in Mozart's late orchestral minuets

I recently published an essay on formal functions in the first strains of minuets from Mozart to Schubert ([link to the essay](#)) and along the way noticed ascending gestures in several pieces. Here I will write about some of Mozart's late minuets, those composed between 1788 and 1791. The pieces are K 568ns2 & 11, K 585ns1 & 3, K 599n4, and K601n1.

The 12 Menuets, K. 568n2. It's clear that the primary interval in the melody is the third F5-A5—see the first violins, horns, and oboes in the pickup and first beat of bar 1. The violins trace this interval again in bar 3 before moving decisively by step to G5. The consequent starts over, but the curious thing is that the violins completely abandon this lower third of the triad for the upper one, A5-C6 in bars 7 & 8 (boxed and marked "c"). --- I've traced the [proto-background](#) F5-A5 (as ^1-^3) a different way: starting at "a" with the horns in bar 1 follow the circles and arrows from horns to violins to oboes to horns again. Notice that the rising line in oboe 1 and bassoon 1--boxed at "b"--is an accompanying line in the cadence. We will see Mozart introduce figures like this in subsequent examples.

Here is the proto-background and its transformation, which I call INV (for inversion), isolated in the oboes and horns at beginning and end.

Oboi.

Corni in F.

In the same set, n11, despite a decidedly angular melodic line in the antecedent phrase and a strongly contrasting second phrase, is squarely settled on scale degree \wedge_3 : B₄ in the first phrase, B₅ in the second phrase. In bar 7 that B₅ turns from G: \wedge_3 into D: \wedge_6 and moves plainly up the scale in flute 1 and bassoon 1 while tracing the same path in the first violins but with register shift. I have argued in the past for this move from \wedge_6 *down* to \wedge_7 as a legitimate variant of the rising line but have occasionally worried about it, too. In instance, there is no doubt whatever about the origin of the first violins' figure in the voice leading of the flutes and bassoons.

antecedent

tr. contrast

D: \wedge_6 \wedge_7 \wedge_8

In the first of 12 Menuets, K585, the first violins send a rocket figure through and past the presentation phrase, eventually going one-too-far to B₅ (\wedge_6) over the subdominant, then settling back to \wedge_5 . In the cadence, the violins drop an octave and trace a line up in the sixteenth notes. In this instance again, the flutes move against the violins, but down: \wedge_6 - \wedge_5 - \wedge_4 -(\wedge_3), the last being what I call a hanging third or implicit third: we certainly *ought* to hear it given the shapes that precede bar 8.

flute at the end of the bar—to C6, then Bb5, the final bar producing still another hanging third, A5. The first flute, however, regains D6 and—resoundingly doubled by the other winds—moves upward D6-Enatural6-F6, as F: ^6-^7-^8. The design of this cadence is quite close to K 585n3.

The Four Menuets, K601 were composed in early February 1791. Among these, n1 is a curiosity in its complexity and its emphasis on chromaticism. One can imagine a bored Mozart setting himself an interesting challenge just to see what he could make of it. The wedge figure in the antecedent—see the arrows in the two violin parts—is repeated at the dominant level to open the complementary phrase, but with some changes. The lower voice in bar 5 is a third farther away from the upper one: D#5 against A3 to begin bar 3 is now C#4 against A#5, or six half-steps become nine. In bar 6, the counterpoint is effectively inverted at the octave by the doubling of the second violin in the first flute -- boxed at "c" -- and the flute then completes the figure to close -- see the box at "d".

Part IV: From 1790 to 1830

Between Mozart and Schubert (Süssmayr, Dittersdorf, Sophia and Jan Dussek, Hummel)

Süssmayr

Franz Xaver Süssmayr, not long after finishing Mozart's Requiem, wrote a set of 12 menuets for a ball in the Redoutensaal, the same Imperial hall for which Mozart himself wrote dances and for which Beethoven wrote the Menuets, WoO7 and Deutsche Tänze, WoO8. Both of Beethoven's sets were played in the same 1795 season as Süssmayr's.

The opening of the first menuet has the processional/refrain quality that I alluded to in connection with WoO8n1 ([link](#)), and at first it seems equally unpromising with respect to rising cadence gestures.

The image displays a musical score for the first menuet by Franz Xaver Süssmayr. The score is written for a full orchestra and includes parts for Flauto picc., Oboi, Fagotti, Corni in C, Trombe in C, Timpani in C-G, Violini I and II, and Violoncelli e Contrabassi. The key signature is one flat (B-flat) and the time signature is 3/4. The first strain begins with a forte (f) dynamic. The second strain, starting at measure 11, features a rising cadence gesture in the first violins, accompanied by the piccolo and first horn.

But instead of no promise, a surprise. Not only do the 1st violins rise steadily through the scale in the second strain, but their progress is rendered unmistakable by accompaniment of the piccolo. Note that the first Horn, with the 1st violins, accomplishes the *cadenza perfetta*.

Violoncelli e
Contrabassi

As in no. 1, however, the menuet ends with a quite determined move upward. Note that Süssmayr avoids parallels in the penultimate bar with some violinistic double-stops.

Violins I and II, Viola, and Cello/Double Bass. The score shows a rising motive in the strings, with a long arrow indicating the ascent. The key signature is D major. The measure numbers 16, IV, V, and I are indicated below the staff.

In the trio, on the other hand, the antecedent already uses a rising motive, which is dutifully filled out in the consequent (which is shown here):

Flute, English Horn, Cor Anglais, Violins I and II, and Viola/Cello/Double Bass. The score shows a rising motive in the strings, with a long arrow indicating the ascent. The key signature is D major. The measure numbers D: I, ii6, V, V, and I are indicated below the staff.

Dittersdorf

Carl Ditters von Dittersdorf's *Brief Ballet in Form of a Contredanse* is an Anglaise (a schottisch or ecossaise) with five trios and a vigorous coda. The fourth trio (or "Alternativo") consists of four phrases, three of which trace the same ascent from \wedge_5 to \wedge_8 . All 16 measures, but only the relevant orchestral parts, are shown here.

Alternativo IV. (Allegretto.)

Sophia Dussek

Sophia Dussek was born into the Corri family, Italian musicians resident in Edinburgh, Scotland. By the 1790s, she was in London and spent most of her professional career as a composer, teacher, and music publisher there.

The tune she used for the first of *Three Favorite Airs, with Variations for the Harp*, book 1 (publication date unknown: could be as early as 1794 or as late as 1825), however, is Welsh and very familiar: "Ar hyd y nos," known in English as "All Through the Night." Three of the four phrases in this simple tune are the same, and each has a perfect authentic cadence. Note the tight frame of tonic chords that results:

Ar hyd y nos.
AIR. I.
Andante

upper register / contrast

The frame goes further, though: the opening gesture is repeated in reverse to close, resulting in a rising cadence gesture (bracket):

Bb — G C — A (F) G — Bb

In the first variation, Dussek applies ornamenting upper thirds to the G and A—(a) bar 3. In the final iteration of the theme phrase, these reach as far as D₅—see the end of (b)—and generate the phantasm of a line from \wedge_3 .

Variation 1

Two musical statements of Variation 1 in G major. Statement (a) features a melody with eighth-note triplets and a bass line with quarter-note triplets. Statement (b) features a more active melody with sixteenth-note runs and a bass line with a strong rising line, marked *ff*.

Variation 2 reverts to, and strongly foregrounds, the rising line of the theme, in the first statement (a) and in the last (b):

Variation 2 (a)

Two musical statements of Variation 2 in G major. Statement (a) features a melody with a rising line and a bass line with a strong rising line. Statement (b) features a more active melody with sixteenth-note runs and a bass line with a strong rising line, marked *ff*.

The final variation adopts 16th note figuration. In the first statement (a) the line from G₅ through A₅ to B_b₅ is clear from the accented position of the notes, the upper ornaments having even less effect than they did in variation 1. The final statement (b), however, breaks out of the tune altogether for the sake of a forceful and virtuosic ending. With circle notes, I have marked a conventional descent from \wedge_5 over the bass.

Variation 3 (a)

(b)

Jan Dussek, Sonata, Op31n2, II

Jan Dussek's Three Sonatas, Op. 31 (1812) are an odd lot of a piano solo sonata sandwiched between two piano trios. The slow movement of the solo sonata opens with a rising figure that traces a line from $\wedge 5$ to $\wedge 8$, a figure repeated directly to close (see mm. 7-8).

^3 ^5 ^6 — ^7 — ^8 —

Hummel published 6 Pièces très faciles, Op.52, in 1815. The set is structured in such a way that one could assemble a three or four movement sonatina out of its members, complete with a short opening cadenza (n1), a sonata-form Allegro (n2), a Romance (*con dolcezza*) (n4, the only piece in the set not in C major), and a Rondo (n7). The Menuet (n3) might substitute for the Romance, or be added to make a four-movement piece, but the ecossaise (n5) is a mystery -- tucked in between the Romance and the Rondo, it is only 24 bars long, hardly weighty enough to count as a movement, but perhaps in the context of informal performance, such departures from form were common enough in Hummel's generation -- or perhaps the young woman playing it would be expected to improvise some variations to augment it.

An opening upward-reaching arpeggio (at "a") is mirrored at "b"; the cadence is clear in its linear contrast ("c") but is undercut by repetition of "a." In the consequent, that repetition is deleted and the cadence is simple and direct. As often happens in dance music, the second strain contrasts sharply with the first: a strong descent from the start -- boxed -- comes down through the octave C6 to C5, and in the continuation phrase there are lines but they go stolidly up from C5 to E5, then down again.

D. C.

Hummel, Bagatelles, op107n6. Hummel's op107 consists of six bagatelles, the last of them a spirited Hungarian rondo. Its theme sits clearly on \wedge_3 in the first strain, which descends abruptly to \wedge_1 in the cadence. The second strain starts by doing the same with \wedge_5 but each of its two phrases takes \wedge_5 upward to \wedge_8 instead. I've isolated these motions in the second strain in the figures below the score.

Nº6. Rondo all'ongarese.
Allegretto vivacetto.

The musical score is written for piano and consists of 12 measures. The first measure is a piano introduction marked 'p'. The second measure begins the first theme, marked with an accent (^2). The third measure continues the first theme, marked with an accent (^3). The fourth measure concludes the first theme, marked with an accent (^4). The fifth measure begins the second theme, marked with an accent (^5). The sixth measure continues the second theme, marked with an accent (^6). The seventh measure concludes the second theme, marked with an accent (^7). The eighth measure begins the final section, marked with an accent (^8). The score includes various musical notations such as chords, arpeggios, and dynamic markings like 'p' (piano) and 'f' (forte). Fingerings are indicated by numbers 1-5 and accents by '^'.

(second strain, first phrase)

(second strain, second phrase)

The second strain in the theme's final statement, which includes the rondo's structural cadence, is shown below. The strain is repeated in its original form at a & b, then embellished at a1 & b1. Note the considerably more emphatic rising line in b1: ^5 in the first bar, ^6-^8 in the second, ^7 in the third, and ^8 in the last, after a direct motion from ^7. The arrow points to a ^6-dropping-to-^7 figure, which could just as easily have been a continuation up, that is A6-B6-C7, rather than A6-B5-C6.

The Hertz and the rising line

John A. Rice has proposed an addition to the repertory of Galant schemata. He calls it the "Hertz," after his mentor Daniel Hertz, a renowned Mozart scholar who first commented on the figure.

The Hertz is associated with a pastoral topic and with emotion. As Rice puts it, "It is no accident that all three of the opera arias cited by Hertz contain the word *core* (also spelled *cor*). Eighteenth-century opera composers associated the sonic sweetness of the subdominant chord over a tonic pedal with the tender emotions of the human heart." (315)

The article has many examples, to which I will add three more. The trio of the last number in Beethoven's 12 menuets, WoO7, provides a simple instance of the Hertz figure. Note the $\wedge 5$ - $\wedge 6$ - $\wedge 5$ with lower thirds and the descent $\wedge 5$ - $\wedge 4$ - $\wedge 3$ (So-Fa-Mi) that follows. In this case, a cadence takes the line all the way down to $\wedge 1$ for an unusual PAC to end the first phrase.

antecedent or "4-bar theme" continuation or contrasting phrase

HEARTZ

$\wedge 5$ — $\wedge 6$ — $\wedge 5$ $\wedge 4$ $\wedge 3$ $\wedge 2$ $\wedge 1$

Trio

p

PAC

contrasting phrase as standing on the dominant

reprise

The image displays three staves of musical notation in 3/4 time. The first staff, labeled 'Trio', shows a piano introduction with a treble and bass clef. Above the staff, a bracket labeled 'antecedent or "4-bar theme"' spans the first four measures, which are marked with the notes SO-FA-MI and the Hertz figure. A second bracket labeled 'continuation or contrasting phrase' spans the next four measures, which end with a cadence (CADENCE) and a perfect authentic cadence (PAC). The notes $\wedge 5$, $\wedge 6$, $\wedge 5$, $\wedge 4$, $\wedge 3$, $\wedge 2$, and $\wedge 1$ are indicated above the staff. The second staff, labeled 'contrasting phrase as standing on the dominant', shows a phrase that begins with a key signature change to one sharp (F#) and ends with a repeat sign. The third staff, labeled 'reprise', shows a phrase that begins with a key signature change to one flat (Bb) and ends with a repeat sign.

The contrasting middle in Mozart's theme for the first movement variations in K. 331 also uses the Hertz, but without the so-fa-mi. Although the many linear analyses of this piece show a

descending line from $\wedge 5$ down to $\wedge 2$ in the half cadence, the voiceleading is tiered and Mozart repeats the Heartz figure a third lower (see $\wedge 3-\wedge 4-\wedge 3$ below $\wedge 5$). He maintains this design very clearly throughout all the variations except the last. (The example is from a facsimile of the first edition, downloaded from IMSLP.)

The strength of stereotyped patterns in the cadence apparently prevented musicians from reversing the direction of the so-fa-mi to la-ti-do. Schubert, however, does manage it nicely in D779n13, even adding some intensifying suspensions in an inner voice. He does change the underlying harmonies so that the entire pattern Heartz + la-ti-do runs above a cadence.

13. *Zart.* *p*

The image shows a musical score for Schubert's D779n13. It consists of two staves, treble and bass. The treble staff has a key signature of two sharps (F# and C#) and a common time signature. The bass staff has a key signature of two sharps (F# and C#) and a common time signature. The music is written in a style typical of the 19th century. Above the treble staff, there are labels: "Heartz" above the first measure, $\wedge 5$ above the second measure, $\wedge 6$ above the third measure, $\wedge 5$ above the fourth measure, $(\wedge 6 \wedge 5)$ above the fifth measure, and $\wedge 6-\wedge 7-\wedge 8$ above the sixth measure. The music features a descending line from $\wedge 5$ down to $\wedge 2$ in the half cadence, with voiceleading tiered and the Heartz figure repeated a third lower.

Schubert

I have written about rising cadence gestures in music by Schubert many times, most extensively in the 200+ entries in my blog *Hearing Schubert D779n13*: [link](#) to the blog; [link](#) to a Guide to the blog. I have also written and posted to Texas Scholar Works a PDF essay *Scale degree $\wedge 6$ in the 19th Century: Ländler and Waltzes from Schubert to Herbert*: [link](#). Here I will

reproduce a few examples from that essay.

The largest sampling of Schubert's earliest dances—from the period 1816 to 1821—appears in the two published collections, D 145 and D 365. It is worth remembering that Schubert was a skilled violinist, and his waltzes clearly show the strongly violinistic figures associated with the Ländler style. In D 145, ns 4-12 are all in Db major. The unusual key of Db major is easily explained as a “darkening” or expressive shading of the archetypical Ländler key of D major. The large number of pieces in Ab major in D 365 and D 779 are accounted for in the same way: Ab as a shading of A major. (A few pieces from D779 were originally written for violin in A major.) D 145n4 may have been transposed down a half step from its “proper” violin key of D major, but there is no mistaking the source as the opening idea (bars 1-2) skates across the fingerboard from right to left.

Note that the very first figure is an expressive leap to an accented $\wedge 6$, as 9 in Vg. The string of similar accented and unaccented leaps that follow encourage a rising gesture in the cadence to the first strain. After such vigorous figures, Schubert often creates a mirroring pattern in the cadence of the second strain, as he does here: a precipitous descent brings the melody down from the accented $\wedge 6$ (as Bb6) to close on Db5.

It is easy to hear a connection between the first accented note, Bb5, its recurrence in bar 5 and a line completed in the cadence. To treat this formally in the Schenkerian manner, however, $\wedge 5$ must be implied. I find this presence of $\wedge 6$ with an absent $\wedge 5$ to be particularly charming.

The ninth dance in D 145 is also in Db major. This time Bb6—the highest Bb on the pianoforte—

opens the piece, and then is touched again in the cadence of the second strain. The effect is to draw our attention to the wedge shape, here with the motions dropping first, then rising, the reverse of n4.

The image shows two staves of music for No. 9. The first strain is marked with an arrow pointing from $\wedge 5$ to $\wedge 6$ to $\wedge 5$ to $\wedge 4$ to $\wedge 3$. The second strain is marked with an arrow pointing from $\wedge 6$ to $(\wedge 5)$ to $(\wedge 6)$. The music is in 3/4 time and features a mix of eighth and sixteenth notes.

In D145n11—still another waltz in Db major, a true V9 in bar 3 hints at the much more dramatic figure of the consequent phrase, where Bb6 is reached. As in the first strain of D 145n9, the implications of these rising figures are realized as a line in the cadence of the second strain, where $\wedge 6$ - $\wedge 7$ - $\wedge 8$ is harmonized with the functional SDT progression.

The image shows two staves of music for No. 11. The first strain is marked with an arrow pointing from $\wedge 6$ to $\wedge 7$ to $\wedge 8$. The second strain is marked with an arrow pointing from $\wedge 6$ to $\wedge 7$ to $\wedge 8$. The music is in 3/4 time and features a mix of eighth and sixteenth notes. The functional SDT progression is indicated as Db: ii6 V7 I.

The final number of D 734, the *Wiener-Damen Ländler* (not Schubert's title—in fact, he specifically objected to it), opens as a ländler but closes more firmly; the second strain very

probably would have been used as a promenade to end a session of dancing. At (a), $\wedge 6$ is an 8th-note escape tone; at (b) $\wedge 6$ is an accented neighbor note; at (c) an unaccented incomplete neighbor; at (d), the neighbor note opens the second strain, picking up on a motive from the first strain in the same way we saw above in D 779n18; and at (e) the waltz ninth carries $\wedge 6$ upward to a close on G5.

Much the same happens in D 769n1. The first phrase hangs on a neighbor note figure where $\wedge 6$ is prominent as part of a rare inverted V9 chord (box).

In the second strain, $\wedge 6$ is touched on briefly (circled), and the cadence then completes an ascent to $\wedge 8$ (A5). Note that the first strain was quiet (*mit Verschiebung* means use the soft pedal) but the rise to the cadence is accompanied by a crescendo (and in performance possibly would have included an acceleration to the end).

D 814 is a set of four Ländler for piano four-hands. A solo version of n1 also exists (Brahms transcribed the others). A small-scale ascent growing out of a $\wedge 5$ - $\wedge 6$ neighbor figure in the first strain is magnified considerably in the second strain.

Postscript: Schumann, *Papillons*, op. 2 (1829; publ. 1831)⁵

In 1827, at the age of 17, Robert Schumann began "revelling" (so he said) in the music of Franz Schubert. He heard the songs for the first time, was introduced by a fellow student Agnes Carus to the four-hand works for piano and—again according to him—fell in love both with "Schubert's Waltzes and her". His diary on 2nd March 1829 mentions a "fruitful improvisation on the Waltz of Longing" [D 365n2]; eight months later he requested the music for the complete Schubert Waltzes from Friedrich Wieck and according to a reminiscence by Friedrich Täglichsbeck played them "beautifully and whenever he had the chance". In 1835, Schumann wrote a review of Opus 9 and 33 (D. 365 and D. 783), in which he imagines a meeting of the *Davidsbund*, a domestic musical evening that resembles an informal, small-scale Schubertiade.

Obviously an early product of that enthusiasm, *Papillons* is filled with pieces that come readily into view as Schubert-style dances exaggerated in tempo, dynamics, and design to create more sharply drawn "portraits" (as Schumann did more effectively a few years later in *Carnaval*).

The compositional origins of *Papillons* are not difficult to understand, but the program is a considerably more complicated matter. As Eric Frederick Jensen summarizes it:

Jean Paul's novel *Flegeljahre* [apparently] provided the direct inspiration only for the last piece in *Papillons* (more accurately, ns 11 and 12, which are related). How, then, can [a series of] annotations in Schumann's copy of *Flegeljahre*, which [mention ns. 1-10 but] make no reference to the last Papillon, be explained? Although he [claimed in a letter that] "one Papillon after another was created," the creation of *Papillons* could not have been spontaneous. Quite likely inspired by his reading of the final scenes in *Flegeljahre*, Schumann composed what would become the conclusion (the eleventh and twelfth pieces). He then thought of expanding what he had composed, and of creating a larger work, using the ball in *Flegeljahre* as its basis. Some of the pieces were then newly composed for the occasion, but Schumann had been composing dance music for years, and little of it had been published. What better place to use it than in a musical depiction of a masked ball? At some point, [he took] his copy of *Flegeljahre* and [marked] passages . . . suitable both for his intentions and for the music, some of which had already been created. (140)

Several of the numbers in *Papillons* are obviously waltzes (1, 4, 9, 10) and several others have the rough clarity of some of the gruffer German dances in Schubert's D. 783 (nos. 3, 8, and 12). The key sequence is D--Eb--f#--A to F#--Bb--d--f to Ab--c# to Db--bb--C--D--D. If that sequence seems rough and abrupt, that's the method in *Papillons* -- Schumann luxuriates in the haphazard key relations that one often finds in dance collections in the 1820s, the irony being that he is creating a set meant to be played as a single composition, relying on published

⁵ Some of the text in this section is drawn from "D779n13 as a number in Schumann's *Papillons*": [blog post](#) and "Robert Schumann's story/review of D365 and D783 and the substitution of D779n13 for D783n7": [blog post](#). In conjunction with these, see also my analysis of the first movement of Schumann's sonata-like suite, *Faschingsschwank aus Wien*, op. 26 (1839), in my *JMT* article, pp. 284-86.

collections that were *not* meant to be played that way. In any case, there is no question of extracting some perfect overarching key scheme -- Schumann's whole point is to avoid it. (Jensen argues that the haphazardness mimics the luxuriant but often disconnected imagery in Jean Paul's novels.)

Despite his abilities as an improviser and his adventurousness with respect to musical genres, Schumann did not pick up on the rising cadence figures that are easily found among Schubert's waltzes. *Papillons*, in fact, is very nearly the only work in which I have found such figures to date, and they are hardly unequivocal instances. In n1, the primary motive is a sweeping octave-doubled scale: "a1" repeated as "b1" "b2" "d1" and "d2." The first is answered in "a2" by a scalar descent of equal size but the energy in "b1" and "d1" is carried upward in "b2" and "d2" and emphatically affirmed in the final measure of each strain.

The image displays a musical score for 'Papillons' No. 1, consisting of two systems of music. The first system is labeled 'Nº 1.' and features a treble and bass staff. The treble staff has a melody with several ascending and descending scale passages. Annotations 'a1', 'a2', 'b1', and 'b2' are placed above the treble staff, with boxes highlighting specific musical phrases. 'a1' and 'a2' are connected by a curved line, indicating a relationship. 'b1' and 'b2' are also connected by a curved line. The bass staff provides harmonic support with chords and single notes. The second system continues the melody and harmony, with annotations 'c', 'd1', and 'd2' placed above the treble staff. 'c' is connected to 'd1' and 'd2' by a curved line. The score includes dynamic markings such as 'p dolce' and 'f', and a tempo marking 'Ad.' (Adagio). The key signature is one sharp (F#) and the time signature is 3/4.

All this is certainly convincing, but ties to voice leading are tenuous; a reasonable underlying pattern with a single upper voice would suggest a *descent* from \wedge_2 to \wedge_1 (E to D) in bars 6-7, repeated in bars 14-15, and the \wedge_1 then vigorously embellished with an ascending scale.

The design of n_1 , on the other hand, is very clear in its sources, as it closely follows one of the most common patterns in Schubert's early dances: a sentence or period in the first strain, a 4-bar contrasting middle with chromaticism (secondary dominant figures) and a diatonic final phrase with repetition or reminiscence of figures from the first strain.

Here are examples from D. 365, a collection that Schumann knew intimately:

The design of n8 in *Papillons* is not quite so clear, but its Schubertian traits are unmistakable. Minor-key dances are rare in Schubert, and when they do occur they almost always give way quickly to the relative major, less often the parallel major, and frequently conclude in the key key/mode. The sharp opposition of loud and soft passages is also characteristic, Schubert's evocation of a common set of figures in dancing, especially as found in rural or lower- and middle-class urban venues. Once Db major is reached in Schumann's n8, however, the design is a simple small ternary form with complete reprise, also very common in Schubert's waltzes.

Schumann exaggerates the minor / minor and *fortissimo* / *piano* oppositions with direction, as the C# minor opening plods downward in a determined way, but then the more expressive first strain of the Db major waltz moves steadily upward: see the arrows in the score below.

Nº 8.

The problem is at the end, where Schumann suddenly cuts off the voice leading strands in the drop to the final V7-I (bars 23-24 of the Db major section). In the thumb of the left hand part, one can easily follow \wedge_3 as it winds around a bit then falls by step to close. The right hand has the same strand until the third bar from the end, where F5 moves upward through G-natural₅ to Ab₅, not down.

We can see what happens more plainly by reconstructing the “correct” ending (note especially *** in the example below).

The device of a rising figure followed by a sudden drop in the penultimate bar, over V7 (or the cadential dominant figure) is common in the early waltz repertoire, and so—voice leading awkwardness aside—it is not at all surprising that Schumann would imitate it. Here are some examples:

Schubert, D 365n30:

Lanner, Op. 165 n1, first and second strains:

Two systems of musical notation for piano. The first system consists of four measures. The first measure has a treble clef and a key signature of two sharps (D major). The second measure starts with a forte (*f*) dynamic and features a triplet of eighth notes. The third measure has a piano (*p*) dynamic and includes a first ending bracket. The fourth measure also has a piano (*p*) dynamic. The second system consists of four measures. The first measure has a forte (*f*) dynamic. The second measure has a piano (*p*) dynamic. The third measure has a piano (*p*) dynamic. The fourth measure includes a first ending bracket and a second ending bracket.

Johann Strauss, sr., Op. 15n5:

A single system of musical notation for piano, labeled "Nº 5.". The score is in D major and 2/4 time. It begins with a piano (*p*) dynamic. The melody in the treble clef is characterized by eighth-note patterns and slurs. The bass clef provides a harmonic accompaniment with chords and single notes. The system concludes with a repeat sign.

Johann Strauss, sr., Op 38n5:

A single system of musical notation for piano. The score is in D major and 2/4 time. It begins with a forte (*f*) dynamic. The melody in the treble clef features trills (marked "tr") and eighth-note patterns. The bass clef provides a harmonic accompaniment with chords and single notes. The system concludes with a repeat sign.

Neumeyer, David. [Analyses of Schubert, Waltz, D.779n13](#)

This article gathers a large number of analyses of a single waltz by Franz Schubert: the anomalous A-major waltz, no. 13 in the Valses sentimentales, D 779. The goal is to make more vivid through examples a critical position that came to the fore in music theory during the course of the 1980s: a contrast between a widely accepted "diversity" standard and the closed, ideologically bound habits of descriptive and interpretative practice associated with classical pc-set analysis and Schenkerian analysis.

Neumeyer, David. [Buelow Contredanses: Rising Lines](#)

Bülow, court musician in Copenhagen in the late 18th century. This file surveys all seven collections (more than the article "Rising Lines in Tonal Frameworks of Traditional Tonal Music").

Neumeyer, David. [Carl Schachter's Critique of the Rising Urlinie](#)

A detailed critique of two articles by Carl Schachter (1994; 1996), this study is concerned with some specific issues in traditional Schenkerian theory, those connected with the rising Urlinie—these can be roughly summarized as the status of \wedge^6 and the status of \wedge^7 . Sixteen of twenty three chapters in this file discuss Schachter's two articles directly, and the other seven chapters (2, 4, 5, 17-20) speak to underlying theoretical problems.

Neumeyer, David. [Complex upper-voice cadential figures in traditional tonal music](#)

Harmony and voice-leading are integrated in the hierarchical networks of Schenkerian analyses: the top (most abstract) level of the hierarchy is a fundamental structure that combines a single upper voice and a bass voice in counterpoint. A pattern that occurs with increasing frequency beginning in the later eighteenth century tends to confer equal status on two upper voices, one from \wedge^5 , the other from \wedge^3 . Analysis using such three-part voice leading in the background often provides richer, more complete, and more musically convincing analyses.

Neumeyer, David. [John Playford Dancing Master: Rising Lines](#)

Musical examples with rising cadence gestures from John Playford's *Dancing Master* (1651), extracted from the article "Rising Lines in Tonal Frameworks of Traditional Tonal Music."

Neumeyer, David. [Kingsbury Hymns of Praise: Rising Lines](#)

Pieces with rising cadence gestures in *Hymns of Praise: For the Church and Sunday School*. Compiled by F. G. Kingsbury. Chicago: Hope Publishing Co., c1922. A hymn book from my father's collection. Because of their largely 19th c origins, it seemed reasonable to think that hymns in the evangelistic tradition would be more likely than older tunes to have rising

cadence gestures.

Neumeyer, David. [Nineteenth-century polkas with rising melodic and cadence gestures: a new PDF essay](#)

This essay provides background on dance in the nineteenth century and then focuses on characteristic figures in the polka, especially those linked to rising cadence gestures. The polka became a popular social dance very quickly in the early 1840s. Its music was the first to introduce rising melodic frames and cadence gestures as common features. This essay provides a series of examples with commentary. Most pieces come from the 1840s and early 1850s. Variants of the polka—polka-mazurka, polka française, and polka schnell—are also discussed and illustrated.

Neumeyer, David. [On Ascending Cadence Gestures in Adolphe Adam's Le Châlet \(1834\)](#).

Adolphe Adam's one-act opéra comique *Le Châlet* (1834) is a milestone in the history of rising cadence gestures and, as such (combined with its popularity), may have been a primary influence on other composers as rising cadence gestures proliferated in opera bouffe and both French and Viennese operetta later in the century, and eventually in the American musical during the twentieth century.

Neumeyer, David. [Rising Lines in the Tonal Frameworks of Traditional Tonal Music](#)

This article supplements, and provides a large amount of additional data for, an article I published nearly thirty years ago: "The Ascending Urlinie," *Journal of Music Theory* 31/2 (1987): 275-303. By Schenker's assertion, an abstract, top-level melody always descends by step to $\wedge 1$. I demonstrated that at least one rising figure, $\wedge 5\text{-}\wedge 6\text{-}\wedge 7\text{-}\wedge 8$, was not only possible but could be readily found in the repertory of traditional European tonal music.

Neumeyer, David. [Scale Degree \$\wedge 6\$ in the 19th Century: Ländler and Waltzes from Schubert to Herbert](#)

Jeremy Day-O'Connell identifies three treatments of scale degree 6 in the major key through the 19th century: (1) classical $\wedge 6$; (2) pastoral $\wedge 6$; and (3) non-classical $\wedge 6$. This essay makes further distinctions within these categories and documents them in the Ländler repertoire (roughly 1800-1850; especially Schubert) and in waltzes after 1850 (primarily the Strauss family). The final case study uses this information to explain some unusual dissonances in an operetta overture by Victor Herbert. Other composers include Michael Pamer, Josef Lanner, Theodor Lachner, Czerny, Brahms, Fauré, and Debussy.

Neumeyer, David. [Table of Compositions with Rising Lines](#)

A table that gathers more than 900 examples of musical compositions with cadences that use ascending melodic gestures.

Neumeyer, David. [Tonal Frames in 18th and 19th Century Music](#)

Tonal frames are understood here as schemata comprising the "a" level elements of a time-span or prolongation reduction in the system of Lerdahl and Jackendoff, *Generalized Theory of Tonal Music* (1983), as amended and extended by Lerdahl (*Tonal Pitch Space* (2001)). I use basic forms from these sources as a starting point but call them tonal frames in order to make a clear distinction, because I have a stricter view of the role of register.
